

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

TO THE

NATIONAL ARITHMETIC,

EXHIBITING THE OPERATION OF

THE MORE DIFFICULT QUESTIONS

IN THAT WORK;

FOR THE USE OF TEACHERS ONLY.

By BENJAMIN GREENLEAF, A. M.,

PRINCIPAL OF BRADFORD TEACHERS' SEMINARY.

BOSTON:

PUBLISHED BY ROBERT S. DAVIS & CO.

NEW YORK: G. F. COOLEIDGE & BROTHER, AND CADY & BURGESS.

PHILADELPHIA: LIPPINCOTT, GRAMBO, & Co.

And sold by the trade generally.

1854.

GREENLEAF'S SERIES OF ARITHMETICS.

1. MENTAL ARITHMETIC, upon the Inductive Plan, designed for Beginners. By Benjamin Greenleaf, A. M., Principal of Bradford (Mass.) Teachers' Seminary.

2. INTRODUCTION TO THE NATIONAL ARITHMETIC, designed for Common Schools. Fifteenth improved stereotype edition, revised and enlarged.

3. THE NATIONAL ARITHMETIC, for advanced Scholars in Common Schools and Academies. Twenty fifth improved stereotype edition. 360 pages, full bound.

COMPLETE KEYS TO THE INTRODUCTION AND NATIONAL ARITHMETICS, containing Solutions and Explanations, for Teachers only. (In separate volumes.)

** The attention of Teachers and Superintendents of Schools generally is respectfully invited to this popular system of Arithmetic, which is well adapted to all classes of students. The whole or a part of this series has been recommended and adopted by the superintending school committees of the principal towns in New England, and is also used in the best public and private schools in various sections of the United States.

GREENLEAF'S NATIONAL ARITHMETIC is now extensively used as a text-book in many distinguished seminaries of learning, including the following:—The several STATE NORMAL SCHOOLS in Massachusetts, under the direction of the State Board of Education; the NORMAL SCHOOLS in New York city; Rutgers Female Institute, New York; Brooklyn (N. Y.) Female Academy; Abbott Female Academy, and Phillips Academy, Andover; Chauncey Hall School, Boston; Bradford Female Seminary; Phillips Academy, Exeter; Young Ladies' Institute, Pittsfield; Worcester County High School, Worcester; Williston Seminary, East Hampton, Mass.; together with the best schools in Boston, New York, Philadelphia, Richmond, Charleston, Savannah, Mobile, New Orleans, and other cities; and wherever the work has been introduced, it is still used with great success, — which is deemed a sufficient recommendation.

Parker's Progressive Exercises in English Composition. New stereotype edition, revised, enlarged, and improved. 144 pages. Price, 38 cents.

Class-Book of Prose and Poetry:

consisting of Selections from the best English and American Authors; designed as Exercises in Parsing, for the use of Common Schools and Academies. By T. Rickard, A. M., and H. Orcutt, A. M. (Teachers). Price 20 cents single \$14 per dozen.

** A cheap work like the above (comprised in a small volume) has long been needed.

The Classical Reader:

A Selection of Lessons in Prose and Verse, from the most esteemed English and American Writers. Intended for the Use of the Higher Classes in Public and Private Seminaries. By F. W. P. Greenwood, D. D., and George B. Emerson, A. M., of Boston. Tenth edition, stereotyped. With an engraved frontispiece.

Smith's Class-Book of Anatomy:

Explanatory of the First Principles of Human Organization as the Basis of Physical Education; with numerous Illustrations, a full Glossary, or Explanation of Technical Terms, and Practical Questions at the Bottom of the Page. Designed for Schools and Families. Tenth stereotype edition, revised and enlarged.

A Grammar of the Greek Language.

By Benjamin Franklin Fisk, A. M. Twenty-ninth improved stereotype edition.

** Fisk's Greek Grammar is used in Harvard University, and in many other distinguished collegiate and academic institutions in various parts of the United States.

Fisk's Greek Exercises. [New Edition.]

Greek Exercises: containing the Substance of the Greek Syntax, illustrated by Passages from the best Greek Authors, to be written out from the Words given in their simplest Form. By Benjamin Franklin Fisk, A. M. "Consuetudo et exercitatio facilitatem maxime parit." — *Quintil.* Adapted to the Author's "Greek Grammar."

Leveque's Caesar's Commentaries.

Cail Julii Caesaris Commentarii de Bello Gallico ad Codices Parisinos recensiti, a N. L. Achaintre et N. E. Lemahre. Accesserunt Notulae Anglicae, atque Index Historicus et Geographicus. Curavit F. P. Leveque, A. M.

Folsom's Cicero's Orations.

M. T. Ciceronis Orationes Quaedam Selectae. Notae Illustratae. [By Charles Folsom, A. M.] In Usum Academiæ Exoniensis. Editio stereotypa, Tabulis Analyticis instructa.

[These editions of Caesar and Cicero are highly recommended by Prof. John J. Owen.]

Published by ROBERT S. DAVIS, 118 Washington Street, BOSTON, and sold by all the principal Booksellers throughout the country.

Also constantly for sale (in addition to his own publications), a complete assortment of School-books and Stationery, which are offered to Booksellers, School Committees, and Teachers on very liberal terms.

P R E F A C E.

THE object of the author, in this publication, is to aid the teacher in communicating instruction to his pupils, and in detecting any error, which they may have made in the operation of the examples.

Every instructor, who has a large number of scholars under his care, is aware, that it is a great tax on his time, especially when in school, to examine the operation of many arithmetical questions; whereas, by the aid of a Key, he may readily detect any mistake in the operation. Besides, amid the labors of the school-room, it is often very difficult for the most able arithmetician to recollect, at the moment, all the principles involved in the solution of difficult questions; but, by recurring to a Key, this difficulty will be obviated.

The author would recommend to teachers, never to point out *directly* to the pupil the method of solving a problem, nor perform the labor for him, but suggest and explain such principles, as will enable him to perform the question himself.

The answers to all the examples in the Arithmetic are inserted in the Key, for the convenience of those teachers, who may prefer to use the edition of the Arithmetic, which does not contain the answers.

B. GREENLEAF.

Bradford, March 28, 1849.

 $\$20,352 + \$5969 + \$5957 = \$32,278$; $\$32,278 - \$17,876 = \$14,402$ Ans.

25. $938 \div 7 = 134$ cloaks, Ans.

26. $97 \times \$5 = \485 ; $97 - 17 = 80$; $80 \times \$8 = \640 ; $\$640 - \$485 = \$155$ gain, Ans.

27. $671 \times 12 = 8052$ pence, Ans.

28. $5280 \times 12 = 63360$ inches, Ans.

29. $1728 \times 16 = 27648$ ounces, Ans.

30. $8136 \div 12 = 678$ shillings, Ans.

31. $3787 \times 1728 = 6543936$ inches, Ans.

$\begin{array}{r} \text{22.} \\ \text{m. fur. rd. ft. in.} \\ 12 \overline{) 215} \text{ 7 1 14 6} \\ \underline{177} \end{array}$				$\begin{array}{r} \text{23.} \\ \text{deg. m. fur. rd. yd. ft. in.} \\ 9 \overline{) 149} \text{ 8 0 0 1 1 6} \\ \underline{1639} \end{array}$							

The answer to No. 23 is correct. But if we subtract 1 furlong from the 4 furlongs, there will remain 3 furlongs. Then, if we add its equal, 39 rods and $5\frac{1}{2}$ yards, — which together are equal to 1 furlong, — to their respective denominations, we obtain another quotient equal in value to the former. But $5\frac{1}{2}$ yards are 5yd. 1ft. 6in., and this we substitute for $5\frac{1}{2}$ yards. The operation will be as follows : —

deg.	m.	fur.	rd.	yd.	ft.	in.
16	39	4	0	0	0	6
		1				

16	39	3	0	0	0	6
			39	5	1	6

16	39	3	39	5	2	0
----	----	---	----	---	---	---

Thus we perceive the value of the two answers is the same. This process we are obliged to take to obtain the answer given on page 79.

deg.	m.	fur.	^{24.} rd.	ft.	in.	bar.
6)97	55	7	35	4	2	1
	16	20	7	12	8	11
						6
	97	55½	3	35	3½	8
		½=4			½=6	1
	97	55	7	35	4	2

In this question we add the ½ mile, = 4 furlongs, to the 3 furlongs, and the ½ foot, = 6 inches, to the 8 inches, and we obtain a correct answer without fractions.

22. $\frac{21}{21}, \frac{22}{21}, \frac{24}{21}, \frac{236}{21}$.
23. $\frac{528}{1188}, \frac{756}{1188}, \frac{6032}{1188}$.
24. $\frac{24}{48}, \frac{36}{48}, \frac{8}{48}, \frac{816}{48}$.
25. $\frac{120}{120}, \frac{476}{120}, \frac{2580}{120}$.
26. $\frac{12012}{14014}, \frac{5096}{14014}, \frac{5320}{14014}$.
27. $\frac{28506816}{178431552}, \frac{7007}{178431552}, \frac{37088064}{178431552}$.

OPERATION.

$$28. \frac{4}{6\frac{2}{3}} = \frac{4}{\frac{20}{3}} = \frac{4}{1} \times \frac{3}{20} = \frac{3}{5}$$

$$\frac{7\frac{1}{2}}{9} = \frac{\frac{15}{2}}{9} = \frac{15}{2} \times \frac{1}{9} = \frac{5}{6}$$

$$\frac{3\frac{1}{2}}{11\frac{1}{2}} = \frac{\frac{7}{2}}{\frac{23}{2}} = \frac{7}{23} \times \frac{2}{23} = \frac{1}{3}$$

$$\frac{1}{5}, \frac{1}{2}, \frac{1}{3}$$

$$3 \times 5 \times 2 \times 3 = 90$$

$$\begin{array}{r|l} 90 & \\ 5 & 18 \times 3 = 54 \\ 6 & 15 \times 5 = 75 \\ 3 & 20 \times 1 = 20 \end{array}$$

$\frac{1}{5}, \frac{1}{2}, \frac{1}{3}$, Ans.

OPERATION.

$$29. \frac{\frac{8}{3}}{11\frac{1}{2}} = \frac{\frac{8}{3}}{\frac{23}{2}} = \frac{8}{3} \times \frac{2}{46} = \frac{1}{30}.$$

$$\frac{6\frac{1}{2}}{31\frac{1}{2}} = \frac{\frac{13}{2}}{\frac{63}{2}} = \frac{13}{63} \times \frac{5}{5} = \frac{1}{5}.$$

$$\frac{29\frac{1}{2}}{65\frac{1}{2}} = \frac{\frac{59}{2}}{\frac{131}{2}} = \frac{59}{131} \times \frac{7}{7} = \frac{4}{9}.$$

$$\begin{array}{r} 1 \quad 1 \quad 4 \\ 3 \overline{) 30' \quad 5' \quad 9} \quad 30 \overline{) 90} \\ \underline{10} \quad \quad \underline{3} \quad \quad 3 \times 1 = 3 \\ \quad \quad \quad \quad \quad 5 \times 1 = 18 \\ \quad \quad \quad \quad \quad 9 \times 4 = 40 \end{array}$$

$$3 \times 10 \times 3 = 90$$

$\frac{8}{30}, \frac{13}{63}, \frac{59}{131}$, Ans.

OPERATION.

$$30. 16 = \frac{16}{1}. \quad \frac{8\frac{1}{2}}{11\frac{1}{6}} = \frac{\frac{17}{2}}{\frac{67}{6}} = \frac{17}{67} \times \frac{2}{2} \times \frac{10}{10} = \frac{88}{117}.$$

$$\frac{88}{117} \times \frac{2}{7} = \frac{176}{819}.$$

$$8\frac{1}{2} \times \frac{3}{5} = \frac{74}{9} \times \frac{3}{5} = \frac{74}{15}.$$

$$\begin{array}{r} 1, 273, 5 \\ 1, 273, 5 \end{array}$$

$$3 \times 273 \times 5 = 4095$$

$$\begin{array}{r} 4095 \\ 1 \overline{) 4095} \times 16 = 65520 \\ 5 \overline{) 176} = 880 \\ 15 \overline{) 273} \times 74 = 20202 \end{array}$$

$\frac{65520}{4095}, \frac{880}{4095}, \frac{20202}{4095}$, Ans.

$$32. \quad \frac{252}{14}. \quad | \quad 33. \quad \frac{1222}{18}. \quad | \quad 34. \quad \frac{477}{9}.$$

CASE IX.

$$2. \text{ (p. 105.) } \frac{4}{5} \times \frac{1}{4} \times \frac{1}{12} \times \frac{1}{20} = \frac{1}{1200} \text{ Ans.}$$

$$3. \frac{3}{5} \times \frac{1}{24} \times \frac{1}{20} \times \frac{1}{12} = \frac{1}{28800} = \frac{1}{28800} \text{ Ans.}$$

$$4. \frac{5}{8} \times \frac{1}{3} \times \frac{1}{8} \times \frac{1}{12} = \frac{1}{2880} \text{ Ans.}$$

$$5. \frac{\overset{3}{6}}{11} \times \frac{1}{16} \times \frac{1}{28} \times \frac{1}{\underset{2}{4}} = \frac{3}{9856} \text{ Ans.}$$

$$6. \frac{3}{4} \times \frac{1}{28} \times \frac{1}{4} \times \frac{1}{20} = \frac{1}{8960} \text{ Ans.}$$

$$7. \frac{1}{5} \times \frac{1}{24} \times \frac{1}{4} \times \frac{1}{5} = \frac{1}{2400} \text{ Ans.}$$

$$8. \frac{4}{7} \times \frac{1}{12} \times \frac{1}{16\frac{1}{2}} \times \frac{1}{40} \times \frac{1}{\underset{2}{8}} = \frac{1}{110880} \text{ Ans.}$$

$$9. \frac{1}{2} \times \frac{1}{3} \times \frac{1}{12} \times \frac{1}{16\frac{1}{2}} \times \frac{1}{40} \times \frac{1}{8} \times \frac{1}{3} = \frac{1}{1140480} \text{ Ans.}$$

$$10. \frac{3}{4} \times \frac{1}{144} \times \frac{1}{272\frac{1}{2}} \times \frac{1}{40} \times \frac{1}{4} = \frac{1}{250980000} \text{ Ans.}$$

$$11. \frac{7}{8} \times \frac{1}{4} \times \frac{1}{\underset{9}{63}} \times \frac{1}{4} = \frac{1}{1152} \text{ Ans.}$$

$$12. \frac{3}{5} \times \frac{1}{2} \times \frac{1}{8} \times \frac{1}{4} = \frac{1}{320} \text{ Ans.}$$

$$13. \frac{1}{8} \times \frac{1}{60} \times \frac{1}{24} \times \frac{1}{365\frac{1}{4}} = \frac{1}{4207680} \text{ Ans.}$$

CASE X.

2. (p. 106.) $\frac{1}{1200} \times 20 \times 12 \times \frac{1}{4} = \frac{260}{1200} = \frac{1}{5}$ Ans.
 3. $\frac{1}{880} \times 12 \times 20 \times 24 = \frac{576}{880} = \frac{3}{5}$ Ans.
 4. $\frac{5}{2592} \times 12 \times \frac{8}{1} \times \frac{1}{2} = \frac{1440}{2592} = \frac{5}{9}$ Ans.
 5. $\frac{3}{880} \times \frac{1}{4} \times 20 \times 12 = \frac{90}{880} = \frac{9}{88}$ Ans.
 6. $\frac{3}{880} \times 20 \times \frac{1}{4} \times 24 = \frac{90}{880} = \frac{9}{88}$ Ans.
 7. $\frac{1}{225} \times \frac{5}{1} \times \frac{1}{4} \times \frac{24}{1} = \frac{45}{225} = \frac{1}{5}$ Ans.
 8. $\frac{1}{110880} \times \frac{8}{1} \times 40 \times \frac{161}{1} \times 12 = \frac{63360}{110880} = \frac{1}{2}$ Ans.
 9. $\frac{1}{1140480} \times \frac{8}{1} \times \frac{8}{1} \times 40 \times \frac{161}{1} \times 12 \times \frac{1}{2} = \frac{170240}{1140480} = \frac{1}{7}$ Ans.
 10. $\frac{3}{25080580} \times \frac{1}{4} \times 40 \times \frac{9721}{1} \times 144 = \frac{18817820}{25080580} = \frac{2}{3}$ Ans.
 11. $\frac{1}{1152} \times \frac{1}{4} \times \frac{63}{1} \times \frac{1}{2} = \frac{1008}{1152} = \frac{7}{8}$ Ans.
 12. $\frac{3}{320} \times \frac{1}{4} \times \frac{8}{1} \times \frac{1}{2} = \frac{12}{320} = \frac{3}{80}$ Ans.
 13. $\frac{1}{2207680} \times \frac{3651}{1} \times 24 \times \frac{60}{1} = \frac{125280}{2207680} = \frac{1}{18}$ Ans.

$$18. \$7\frac{3\frac{3}{4}}{4\frac{2}{3}} = \$7\frac{36}{22}; \frac{36}{11} \times \frac{5}{2} = \frac{180}{22}; \$7\frac{180}{22}.$$

To find the value of $\frac{180}{22}$ of a dollar, we multiply the numerator, 180, by 100, and divide the product by 22; thus, $180 \times 100 = 18000$; $18000 \div 22 = 74\frac{48}{11}$. The answer, therefore, will be $\$7.74\frac{48}{11}$.

CASE XII.

$$7. (p. 109.) \text{ 1s.} = 48\text{qr.}; 3\frac{1}{2}\text{d.} = 14\text{qr.}; \frac{1}{4} = \frac{1}{4} \text{ Ans.}$$

$$\begin{array}{r} 31. \\ 34 \overline{) 97} \\ \underline{244} \text{ Ans.} \end{array} \qquad \begin{array}{r} 32. \\ \frac{2}{1} \times \frac{40}{1} = \frac{80}{1} = 80 \\ \frac{2}{1} \times \frac{40}{1} = \frac{80}{1} = 80 \end{array} \qquad \begin{array}{r} 40 \\ 11 \overline{) 118} \\ \underline{284} \text{ Ans.} \end{array}$$

33.
 $\frac{1}{4} \times \frac{9}{8} = \frac{9}{32} = 2\frac{1}{4}$ feet.
 $\frac{1}{8} \times \frac{9}{8} = \frac{9}{64}$; $\frac{9}{64} \times \frac{9}{8} = \frac{9}{512} = \frac{1}{4}$ foot.
 $2\frac{1}{4} - \frac{1}{4} = 2$ feet, Ans.

34.

$$\frac{49\frac{5}{8}}{97} = \frac{\frac{397}{8}}{\frac{97}{1}} = \frac{397}{8} \times \frac{1}{97} = \frac{397}{776}.$$

$$\frac{34\frac{3}{4}}{145\frac{3}{11}} = \frac{\frac{173}{4}}{\frac{1593}{11}} = \frac{173}{4} \times \frac{11}{1593} = \frac{1893}{5988}.$$

$$\frac{397}{776} - \frac{1893}{5988} = \frac{847651}{3100020} \text{ Ans.}$$

NOTE. A square yard is 9 square feet; and $\frac{1}{4}$ of 9 feet is $2\frac{1}{4}$ feet. $\frac{1}{4}$ of a yard in length is 6 inches, and the square of 6 inches is 36 inches. 36 inches are $\frac{1}{4}$ of a square foot. Thus, $\frac{36}{144} = \frac{1}{4}$ foot. This fourth we subtract from $2\frac{1}{4}$ feet. Thus, $2\frac{1}{4} - \frac{1}{4} = 2$ feet, Ans.

 39. $500 \div 10 = 50$; $4\frac{3}{8} = \frac{1}{8}$ acre, Ans.
 40. $71.87 \div 9 = 7.98\frac{1}{9} = 7\frac{1}{9}$; $\frac{1}{4} \times 7\frac{1}{9} = 1\frac{7}{36} = 1\frac{1}{5} = \$4.56\frac{2}{3}$ Ans.
 41. $4.56\frac{2}{3} \times \frac{1}{4} = 7.98\frac{1}{9}$; $7.98\frac{1}{9} \times 9 = \71.87 Ans.
 42. $111 \times 19 = 2109$; $2109 \div 47 = 44\frac{1}{47}$ days, Ans.
 43. $44\frac{1}{47} \times 47 = 2109$; $2109 \div 19 = 111$ days, Ans.
 44. $2\frac{1}{2} \times \frac{1}{4} = 10\frac{1}{4} = 25.30$; $25.30 \times 17 = \$430.10$ Ans.
 45. $430.10 \div 17 = 25.30$; $\frac{1}{11} \times 25\frac{3}{10} = 10\frac{1}{11} = \9.20 Ans.
 46. $1\frac{1}{4} \times \frac{1}{4} = 11\frac{1}{4} = 16.34\frac{1}{4}$; $16.34\frac{1}{4} \times 7 = \114.40 Ans.
 47. $\frac{7}{16} \times 11\frac{1}{4} = 11\frac{1}{8} = \7.15 Ans.
 48. $8\frac{1}{2} = 17$; $11\frac{1}{2} = 23$; $17 \times \frac{1}{4} = 4\frac{1}{4}$; $\frac{1}{16} \times 4\frac{1}{4} = 9\frac{1}{16}$ days, Ans.
 49. $19 \div 4 = 4\frac{3}{4}$; $25 \times 4\frac{3}{4} = \118.75 Ans.
 50. $87.25 \div 15 = 5.81\frac{2}{3}$; $5.81\frac{2}{3} \times 100 = \$581.66\frac{2}{3}$ Ans.
 51. $81.75 \div 20 = 4.08\frac{3}{4}$; $4.08\frac{3}{4} \times 70 = \$286.12\frac{1}{2}$ Ans.
 52. $19\frac{1}{2} = 23\frac{1}{2}$; $19\frac{1}{2} \times 23\frac{1}{2} = 451\frac{1}{4} = \$193.38\frac{1}{4}$ Ans.
 53. $47.25 \div 3 = 15.75$; $15.75 \times 11\frac{1}{2} = \$179.81\frac{1}{2}$ Ans.
 54. $\frac{1}{4} \times \frac{1}{4} = 2\frac{1}{4} = \$5.31\frac{1}{4}$ Ans.
 55. $13\frac{3}{4} = 27$; $27 \times \frac{1}{4} = 21\frac{3}{4} = \$209.77\frac{3}{4}$ Ans.
 56. $\frac{1}{2} = 2$; $120 \times \frac{1}{2} = 240 = 120$ feet, Ans.
 57. $20 \times 8 = 160$; $160 \div 12 = 13\frac{1}{3}$ days, Ans.
 58. $5 \times 10 \times 23 = 1150$ hours; $1150 \div 46 = 25$ hours;
 $25 \text{ hours} \div 8 = 3\frac{1}{8}$ days, Ans.
 59. Smith will reap $\frac{1}{8}$ of the field in an hour; his wife will
 reap $\frac{1}{16}$ of the field in an hour. They will both reap
 $\frac{1}{8} + \frac{1}{16} = \frac{3}{16}$ of the field in an hour. Then they
 will reap the whole field in $2\frac{2}{3}$ hours = $45\frac{1}{3}$; $45\frac{1}{3}$
 $\div 8 = 5\frac{3}{8}$ days, Ans.
 60. 15 tons 7 cwt. 2 qr. 18 lb. = 3445 lb.; $\$2067.48 \div 3445$
 $= 6$ cents per lb.; 1 ton = 2240 lb.; $2240 \times 6 =$
 $\$134.40$ per ton; $\$134.40 \times 78 = \10483.20 Ans.

61. $9\frac{1}{8} = 9.87\frac{1}{2} = 127\frac{1}{2}$; $\frac{1}{87} \times 127\frac{1}{2} = 1\frac{1}{2}$; $7387 \times 1\frac{1}{2} = 1285\frac{1}{2} = 650\frac{1}{2}$ miles, Ans.
62. $\frac{5}{8} \times 96\frac{3}{4} = 60\frac{1}{2}$; $96\frac{3}{4} - 60\frac{1}{2} = 36\frac{1}{4}$; $36\frac{1}{4} \div 2 = 18\frac{1}{8}$ yards, Ans.
63. $1\frac{1}{2} + 1\frac{1}{2} = 3$, horse and chaise; $3 = \$250$; $250 \div 23 = 10\frac{2}{3}$; $10\frac{2}{3} \times 12 = \$130\frac{2}{3}$, horse; $10\frac{2}{3} \times 11 = \$119\frac{2}{3}$, chaise; $\frac{7}{11} \times 130\frac{2}{3} = \$83\frac{1}{3}$, harness.
64. $\frac{1}{4} \times \frac{1}{4} = \frac{1}{16}$ a bushel; $17\frac{1}{8} = 14\frac{1}{2}$; $14\frac{1}{2} \times \frac{1}{16} = \frac{287}{32} = 30\frac{3}{4}$ bushels, Ans.
65. $2\frac{3}{4} = 1\frac{1}{2}$; $17\frac{1}{2} = 12\frac{1}{2}$; $12\frac{1}{2} \times \frac{7}{11} = 7\frac{4}{11}$ A. Ans.
66. $17\frac{1}{2} = 12\frac{1}{2}$; $7\frac{1}{2} = 1\frac{1}{2}$; $12\frac{1}{2} \times \frac{17}{12} = 17 = 2\frac{3}{4}$ bu. Ans.
67. $1.37\frac{1}{2} \times 47\frac{3}{4} = 65.65\frac{1}{2}$; $176.18 - 65.65\frac{1}{2} = 110.52\frac{1}{2}$; $2\frac{3}{4} = 2.42\frac{1}{2} = 1\frac{1}{2}$; $110.52\frac{1}{2} \times 1\frac{1}{2} = 165.7875 = 45\frac{6933}{13600}$ bushels, Ans.
68. $8\frac{1}{2} = 4\frac{1}{2}$; $4\frac{1}{2} \times \frac{1}{4} = \frac{9}{8} = \$1.17\frac{1}{2}$ Ans.
69. $18\frac{3}{4} = 18\frac{3}{4}$; $21\frac{1}{2} \times \frac{8}{18\frac{3}{4}} = 18\frac{3}{4}$; $7\frac{1}{2} = 3\frac{1}{2}$; $18\frac{3}{4} \times 3\frac{1}{2} = 18\frac{3}{4} \times 3\frac{1}{2} = 9.19\frac{17}{20}$ Ans.
70. $17\text{£. } 8\text{s. } 11\text{d.} = 4187\text{d.}$; $9\frac{3}{11} = 10\frac{2}{11}$; $4187 \times \frac{11}{10\frac{2}{11}} = 4187 \times \frac{11}{10\frac{2}{11}} = 19\frac{1}{4} = 1\frac{1}{2}$; $4187 \times 1\frac{1}{2} = 6280\frac{1}{2} = 8837\frac{1}{4}\text{d.} = 36\text{£. } 16\text{s. } 5\frac{1}{4}\text{d.}$ Ans.
71. $756\frac{1}{11} = 832\frac{1}{11}$; $7\frac{1}{2} = 4\frac{1}{2}$; $832\frac{1}{11} \times \frac{5}{4\frac{1}{2}} = 416$ = 100 garments, Ans.
72. $18\frac{1}{2} = 13\frac{1}{2}$; $2000 \times \frac{7}{13\frac{1}{2}} = 830\frac{1}{2}$; $171\frac{1}{2} = 13\frac{1}{2}$; $830\frac{1}{2} \times 13\frac{1}{2} = 830\frac{1}{2} \times 13\frac{1}{2} = 830.50\frac{1}{2}$ Ans.
73. $147\frac{3}{11} = 13\frac{1}{2}$; $36\frac{1}{2} = 3\frac{1}{2}$; $13\frac{1}{2} \times \frac{2}{3\frac{1}{2}} = 1\frac{1}{2}$; $97\frac{1}{2} = 3\frac{1}{2}$; $1\frac{1}{2} \times 3\frac{1}{2} = 1\frac{1}{2} \times 3\frac{1}{2} = 392\frac{1}{2}$ miles, Ans.
74. $97\frac{1}{2} = 3\frac{1}{2}$; $200 \times \frac{1}{3\frac{1}{2}} = 200$; $32\frac{1}{2} = 3\frac{1}{2}$; $200 \times 3\frac{1}{2} = 200 \times 3\frac{1}{2} = 166\frac{1}{2}$ miles, Ans.
75. $19\frac{1}{2} = 13\frac{1}{2}$; $87\frac{1}{2} = 3\frac{1}{2}$; $13\frac{1}{2} \times \frac{7}{3\frac{1}{2}} = 13\frac{1}{2} = 1\frac{1}{2}$; $1\frac{1}{2} \times \frac{1}{1} \times \frac{1}{1} = 1\frac{1}{2} = 93\frac{1}{2}$ bu. Ans.

NOTE. The pupil will find, in performing the above questions, that he can abridge the operation by *cancellation*.

MISCELLANEOUS QUESTIONS.

1. (p. 133.) $17\frac{3}{11} = \frac{190}{11}$; $4\frac{7}{9} = \frac{43}{9}$; $\frac{190}{11} \times \frac{43}{9} = \frac{8170}{99} = 82\frac{52}{99}$ miles, = 82m. 4fur. 8rd. 1ft. 4in. Ans.

$$32 \text{ feet, Ans.}$$

$$27. 1112\frac{5}{8} = \frac{8901}{8}; \frac{8901}{8} \times \frac{1}{128} = \frac{8901}{1024} = \$8\frac{5}{8} \text{ Ans.}$$

$$28. 7\frac{1}{2} = \frac{15}{2}; \frac{15}{2} \times \frac{68}{1} = \frac{1020}{1} = \$538\frac{1}{2} \text{ Ans.}$$

$$29. 8\frac{2}{3} = \frac{26}{3}; 42\frac{2}{3} = \frac{212}{3}; \frac{26}{3} \times \frac{212}{3} = \frac{5512}{9} = \$369.20$$

Ans.

$$30. \frac{3}{8} - \frac{3}{8} = 0.$$

$$31. 20 \times 15 = 300\text{ft.}, \text{ contents of upper part of the room.}$$

$$20 + 15 = 35; 35 \times 2 = 70\text{ft.}, \text{ length round the room.}$$

$$70 \times 8\frac{1}{2} = 595\text{ft.}, \text{ contents of upright ceiling of the room.}$$

$$2 \times 7 \times 3 = 42\text{ft.}, \text{ contents of the doors.}$$

$$4 \times 5\frac{1}{2} \times 3\frac{1}{2} = 73\frac{1}{2}\text{ft.}, \text{ contents of the windows.}$$

$70 - 6 = 64$; $64 \times \frac{3}{4} = 48\frac{3}{4}$ ft., contents of mopboards.

NOTE. We deduct 6 feet for the two doors.

$595 + 300 = 895$; $42 + 73\frac{1}{2} + 42\frac{3}{4} = 158$.

$895 - 158 = 737$ feet; $737 \div 9 = 81\frac{8}{9}$ square yards.

$81\frac{8}{9} \times 6\frac{1}{4} = 1\frac{3}{4} \times 2\frac{1}{4} = 1\frac{3}{4} \times 2\frac{1}{4} = \$5.11\frac{2}{3}$ for plastering.

$595 - 158 = 437$ ft.; $437 \div 9 = 48\frac{5}{9}$ square yards.

$48\frac{5}{9} \times .09 = \4.37 for papering.

$48\frac{5}{9} \times 3 = 145\frac{5}{3} = 48\frac{2}{3}$; $2\frac{2}{3} = 1\frac{2}{3}$; $48\frac{2}{3} + 1\frac{2}{3} = 50\frac{4}{3} \times \frac{5}{18} = 2\frac{1}{3} \times \frac{5}{18} = \$2.80\frac{5}{9}$ for paper.

35. First find the interest on the shoes from the time they

become due until the time of settlement; add this interest to the value of the shoes.

$$\begin{aligned}
 & \$ 865 \times 1.068\frac{1}{2} = \$ 924.54; \$ 386.27 \times 1.063\frac{1}{2} = \\
 & \$ 410.86; \$ 769.25 \times 1.056\frac{1}{2} = \$ 812.84; \$ 183.75 \\
 & \times 1.047\frac{1}{2} = \$ 192.44; \$ 396.81 \times 1.043\frac{1}{2} = 414.00. \\
 & \$ 924.54 + \$ 410.86 + \$ 812.84 + \$ 192.44 + \$ 414.00 \\
 & = \$ 2754.68, \text{ amount of the shoes.}
 \end{aligned}$$

Then find the amount of the sums G. K. M. has received, from the time when received to the time of settlement.

$$\begin{aligned}
 & \$ 1000 \times 1.061\frac{1}{2} = 1061.33; \$ 375.25 \times 1.053\frac{1}{2} = \\
 & \$ 395.26; \$ 681.29 \times 1.049 = \$ 714.67; \$ 100 \times \\

Balance due at the time of payment,	\$ 7.61

NOTE. — Interest on the above note is computed at 7 per cent.

SECTION XXXIX.

MISCELLANEOUS PROBLEMS IN INTEREST.

2. (p. 181.) $\$120 \times .01 = 1.20 \times 1\frac{1}{2} = 1.60$; $133.20 - 120 = 13.20 \div 1.60 = 8\frac{1}{2}$ per cent. Ans.
3. $\$280 \times .01 = 2.80 \times 6\frac{1}{2} = 18.20$; $411.95 - 280 = 131.95 \div 18.20 = 7\frac{1}{2}$ per cent. Ans.
5. $\$120 \times .08\frac{1}{4} = 9.90$; $133.20 - 120 = 13.20 \div 9.90 = 1\frac{1}{3}$ y. = 16 months, Ans.
6. $\$280 \times .07\frac{1}{4} = 20.30$; $411.95 - 280 = 131.95 \div 20.30 = 6\frac{1}{2}$ years, Ans.
8. $\$1.00 \times .08\frac{1}{4} = .0825 \times 1\frac{1}{2} = .11$; $13.20 \div .11 = \$120.00$ Ans.
9. $.07\frac{1}{4} = .0725 \times 6\frac{1}{2} = .47125 \div 1 = 1.47125$; $411.95 \div 1.47125 = \$280.00$ Ans.

8. $\$3675 \times .04875 = \$179.15\frac{1}{2}$ Ans.
9. $\$896 \times .12 = \107.52 Ans.
10. $\$850 \times .18\frac{1}{2} = \157.25 Ans.
11. $\$9870 \times .07 = \690.90 Ans.
12. $\$1.00 - .15 = .85$; $\$1728 \times .85 = \1468.80 Ans.
13. $\$1.00 - .10 = .90$; $\$2475 \div .90 = \2750 Ans.
14. $\$1.00 - .12\frac{1}{2} = .87\frac{1}{2}$; $\$26,250 \div .87\frac{1}{2} = \$30,000$ Ans.
15. $\$3600 \times .60 = \2160 Ans.
16. $\$1.00 - .10 = .90$; $\$600 \times .90 = \540 Ans.
17. $\$1.00 - .03 = .97$; $\$1000 \div .97 = \$1030.92,7+$
 $\$1.00 - .05 = .95$; $\$1030.92,7 \div .95 = \$1085.18,7+$
 $\$1.00 - .06 = .94$; $\$1085.18,7 \div .94 = \$1154.45,4+$
 $\$1.00 - .07 = .93$; $\$1154.45,4 \div .93 = \$1241.34,8+$
 Ans.

SECTION XLVI.

BANKING.

1. (p. 194.) $\$476 \times .005\frac{1}{2} = \$2.61,8$ Ans.
2. $\$1000 \times .010\frac{1}{2} = \10.50 Ans.
3. $\$7800 \times .015\frac{1}{2} = \120.90 Ans.
4. $\$8000 \times .010\frac{1}{2} = \84.00 Ans.
5. $\$760 \times .025\frac{1}{2} = \19.38 ; $\$760 - \$19.38 = \$740.62$ Ans.
6. $\$1728 \times .015\frac{1}{2} = \$26.78,4$; $\$1728 - \$26.78,4 = \$1701.21,6$ Ans.
7. $\$7860 \times .030\frac{1}{2} = \239.73 ; $\$7860 - \$239.73 = \$7620.27$ Ans.

8. $\$3.50 \times 450 = \1575 , price for which the fish were bought.
 $\$4.00 \times 450 = \1800 , price for which they were sold.
 $\$1800 \times .010\frac{1}{2} = \54.90 ; $\$1800 - \$54.90 = \$1745.10$,
 received at the bank.
 $\$1745.10 - \$1575 = \$170.10$, gain on the fish, Ans.

SECTION XLVII.

BARTER.

1. (p. 195.) $760 \times 8 = 6080 \div 12\frac{1}{2} = 486\frac{2}{5}$ lb. Ans.
2. $760 \times 62\frac{1}{2} = 47500 \div 17 = 2794\frac{2}{17}$ lb. Ans.
3. $3 \times 63 \times 1.10 = 207.90 \div 126 = \1.65 Ans.
4. $12 \times 112 \times 8 = 10752 \div 196 = \$0.54\frac{2}{7}$ per lb. Ans.
5. 17cwt. 3qr. 4lb. = 1992lb.; $41 \times 6.70 = \$274.70 - \$88 = \$186.70 \div 1992 = \$0.09\frac{2}{11}$ Ans.
6. B's tea cost him 40 cents per lb., and he sells it for 50 cents per lb.; his gain, therefore, is $\frac{1}{4}$ of the principal, or 25 per cent. A's gain is 4 cents on the lb., and his gain, to be in proportion to B's, must be $\frac{1}{4}$ of the principal; A's sugar, therefore, will be $4 \times 4 = 16$ cents per lb., Ans.
7. $15 \times 63 \times 1.25 = \$1181.25 \div 25 = 47\frac{1}{4}$ M. staves, Ans.
8. As Q bought his oats for 35 cents per bushel, and sold them at 50 cents, his gain per cent. is $50 - 35 = 15$; $\frac{15}{35} = \frac{3}{7}$ of the cost. If, therefore, we add $\frac{3}{7}$ of the cost of Z's flour to $\$5.00$, we have his bartering price; thus, $\frac{3}{7}$ of $\$5.00 = \$2.14\frac{2}{7}$; $\$2.14\frac{2}{7} + \$5.00 = \$7.14\frac{2}{7}$ per barrel; and $670 \times .50 = \$335 \div \$7.14\frac{2}{7} = 16\frac{2}{10}$ barrels of flour, Ans.
9. 7s. = 84d.; 6s. 8d. = 80d.; $\frac{80}{84} = \frac{20}{21}$; $100 \times \frac{20}{21} = 95\frac{5}{21}$ per cent.; 7s. 6d. = 90d.; 7s. 3d. = 87d.; $\frac{87}{90} = \frac{29}{30}$; $100 \times \frac{29}{30} = 96\frac{2}{3}$ per cent.; $96\frac{2}{3} - 95\frac{5}{21} = 1\frac{1}{7}$ per cent. Ans. That is, Samuel Jenkins will lose $1\frac{1}{7}$ per cent. on his corn.

SECTION XLIX.

EQUATION OF PAYMENTS.

2. (p. 199.) \$50 to be paid in 2 months, is the same as \$100 in 1 month; \$150 in 8 months, is the same as \$100 in 12 months. The equated time, then, will be, as if \$100 were to be paid in 1 month, \$100 in 5 months, and \$100 in 12 months; that is, \$100 in $1 + 5 + 12 = 18$ months; consequently \$300 in $\frac{1}{3}$ of 18 months = 6 months, Ans.

OPERATION.

$$\$ 50 \times 2 = 100$$

$$\$100 \times 5 = 500$$

$$\$150 \times 8 = 1200$$

$$\begin{array}{r} \$300 \quad 300 \quad) \quad 1800 \quad (\text{6 months, Ans.} \\ \underline{1800} \end{array}$$

3. \$200 to be paid in 3 months, is the same as \$100 in 6 months; and \$300 in 5 months, is the same as \$100 in 15 months; and \$500 in 10 months, is the same as \$100 in 50 months. If, then, \$100 is to be paid in $6 + 15 + 50 = 71$ months, \$1000 should be paid in $\frac{1}{10}$ of 71 months = $7\frac{1}{10}$ = 7mo. 3da. Ans.

OPERATION.

$$\$ 200 \times 3 = 600$$

$$\$ 300 \times 5 = 1500$$

$$\$ 500 \times 10 = 5000$$

$$\begin{array}{r} \$1000 \quad 1000 \quad) \quad 7100 \quad (7\frac{1}{10} \text{ months, Ans.} \\ \underline{7000} \\ 100 \end{array}$$

4. \$50 for 4 months, is \$1 for 200 months; and \$100 for 8 months, is \$1 for 800 months. If, then, \$1 is to be paid in $200 + 800 = 1000$ months, \$150 should be paid in $\frac{1}{150}$ of 1000 months $= \frac{1000}{150} = 6\frac{2}{3}$ months. It appears, then, that \$150 is paid $6\frac{2}{3}$ months before it is due. The question now is, In how much *less* than 10 months should the \$250 be paid? As we have before shown that \$1 is to be paid in 1000 months, \$250 should be paid in $\frac{1}{250}$ of 1000 months $= 1000 \div 250 = 4$ months. We find, then, that the time in which B is to pay A, is 4 months *less* than it otherwise would have been, on account of A's making present payment. We therefore subtract 4 months from 10, and find the true answer; thus, $10 - 4 = 6$ months, Ans.

OPERATION.

$$\begin{array}{r}
 50 \times 4 = 200 \\
 100 \times 8 = 800 \\
 \hline
 150 \quad 150) 1000 \quad (6\frac{2}{3} \text{ months.} \\
 \underline{1000}
 \end{array}$$

$$\begin{array}{l}
 150 \times 6\frac{2}{3} = 1000 \div 250 = 4 \text{ months;} \\
 10 - 4 = 6 \text{ months, Ans.}
 \end{array}$$

5. As $\frac{1}{2}$ of \$144 is paid 7 months before it is due, it is evident the remainder, \$72, is payable in 14 months; but \$48 of this sum is paid in 4 months, which is 10 months before it is due. There will then remain \$24 unpaid; and the question will be, How long may \$24 be kept to pay the interest of \$72 for 10 months? \$72 for 10 months, is the same as \$1 for 720 months; and \$1 for 720 months, is the same as \$24 for $\frac{1}{24}$ of 720 months $= 720 \div 24 = 30$ months. To the 30 months we add the 4 months, and we have the whole equated time; thus, $30 + 4 = 34$ months $= 2\text{y. } 10\text{mo.}$ Ans

OPERATION.

$$\begin{array}{r}
 144 \times 7 = 1008 \\
 \hline
 72 \\
 48 \times 4 = 192 \\
 \hline
 120 \quad 24 \mid 816 \text{ (34mo. = 2y. 10mo. Ans.} \\
 \hline
 24 \quad \quad 72 \\
 \hline
 \quad \quad 96 \\
 \quad \quad 96 \\
 \hline
 \end{array}$$

6. \$133 $\frac{1}{3}$ in 2 months, is the same as \$1 in 266 $\frac{2}{3}$ months; and \$266 $\frac{2}{3}$ in 3 months, is the same as \$1 in 800 months; \$400 in 6 months, is the same as \$1 in 2400 months; and \$1 in 266 $\frac{2}{3}$ + 800 + 2400 = 3466 $\frac{2}{3}$ months, is the same as \$800 for $\frac{1}{800}$ of 3466 $\frac{2}{3}$ months = 3466 $\frac{2}{3}$ \div 800 = 4 $\frac{1}{3}$ months. And if $\frac{1}{2}$ of \$800 be paid down, the remainder, \$400, may be kept twice 4 $\frac{1}{3}$ months = 8 $\frac{2}{3}$ months, Ans.

OPERATION.

$$\begin{array}{r}
 \$133\frac{1}{3} \times 2 = 266\frac{2}{3} \\
 266\frac{2}{3} \times 3 = 800 \\
 400 \times 6 = 2400 \\
 \hline
 800 \quad 400 \mid 3466\frac{2}{3} \text{ (8 months.} \\
 \hline
 400 \quad \quad 3200 \\
 \hline
 400 \quad \quad 266\frac{2}{3} \\
 \quad \quad 30 \\
 \hline
 400 \mid 8000 \text{ (20 days.} \\
 \hline
 \quad \quad 800 \\
 \hline
 \quad \quad 0
 \end{array}$$

10 *

8. The various parcels of goods will become due as follows:—

May 1, a bill amounting to	\$600.
July 7, " " "	\$370.
July 15, " " "	\$560
Oct. 20, " " "	\$420

OPERATION.

$$\begin{array}{r}
 \$600 \times 0 = \\
 370 \times 67 = 24790 \\
 560 \times 75 = 42000 \\
 420 \times 172 = 72240 \\
 \hline
 \$1950 \quad 1950 \quad 139030 \quad (71\frac{58}{195} \text{ Ans.} \\
 \quad \quad \quad 13650 \\
 \quad \quad \quad \hline
 \quad \quad \quad 2530 \\
 \quad \quad \quad 1950 \\
 \quad \quad \quad \hline
 \quad \quad \quad 580
 \end{array}$$

The medium time of payment will therefore be $71\frac{58}{195}$ days, that is, 72 days from May 1, which will be July 11.

NOTE.—Merchants generally prefer the following method:

$$\begin{array}{r}
 \$600 \times 0 \\
 370 \times 2\frac{6}{30} = 814 \\
 560 \times 2\frac{1}{3} = 1381\frac{1}{3} \\
 420 \times 5\frac{1}{3} = 2366 \\
 \hline
 \$1950 \quad 1950 \quad 4561\frac{1}{3} \quad (2\text{mo. } 10\frac{34}{195}\text{da. Ans.}
 \end{array}$$

9. The bill will become due as follows :—

June 1, 1845,	a bill for	\$675.25
Nov. 4, “	“ “	376.18
“ 25, “	“ “	821.75
June 1, 1846,	“ “	961.25
April 1, “	“ “	144.50
Aug. 10, “	“ “	811.30
“ 12, “	“ “	567.70
“ 15, “	“ “	369.80

\$675.25 × 0

376.18 × 156 = \$58684.08

821.75 × 177 = 145449.75

961.25 × 365 = 348856.25

144.50 × 304 = 43928.00

811.30 × 435 = 352915.20

567.70 × 437 = 248084.90

369.80 × 440 = 162712.00

\$4727.73

\$4727.73) 1360630.48 (288.8 days, Ans.

The medium time of payment will, therefore, be 288.8 =

289 days from June 1, 1845, which will be March 16, 1846.

74.

BY ANALYSIS.

If A and B can perform a piece of labor in $5\frac{5}{11}$ days, it is evident, that in 1 day they would do $\frac{1}{5\frac{5}{11}} = \frac{11}{56}$ of the work.

If B and C can do the work in $6\frac{2}{3}$ days, in 1 day they would perform $\frac{1}{6\frac{2}{3}} = \frac{3}{20}$ of the work. If A and C can do

the work in 6 days, in 1 day they would perform $\frac{1}{6}$ of it. It then appears, that A, B, and C, by laboring each 2 days, will perform $\frac{11}{56} + \frac{3}{20} + \frac{1}{6} = \frac{38}{80} = \frac{1}{2}$ of the work; and, therefore, by laboring 1 day each, they would do $\frac{1}{2}$ of $\frac{1}{2} = \frac{1}{4}$ of it. And if $\frac{1}{4}$ of the labor be performed in 1 day, it is evident that the whole work will be performed in 4 days, Ans.

If A, B, and C, can do $\frac{1}{4}$ of the work in one day, and A and B can do $\frac{11}{56}$, it is evident that C can do $\frac{1}{4} - \frac{11}{56} = \frac{4}{56} = \frac{1}{14}$ of it in 1 day, and therefore will be 14 days in performing the whole. B and C can do $\frac{3}{20}$ of it in a day; therefore A can do $\frac{1}{4} - \frac{3}{20} = \frac{1}{10}$ of it in a day, or he will be 10 days in doing the whole. A and C can do $\frac{1}{8}$ of the work in a day; therefore B can do $\frac{1}{4} - \frac{1}{8} = \frac{1}{8}$ in a day, or, in performing the whole labor, he will be 8 days, Ans.

FORM OF STATEMENT.

$5\frac{5}{11}$ days : 1 day :: 1 work : $\frac{11}{56}$ work = A and B.

$6\frac{2}{3}$ days : 1 day :: 1 work : $\frac{3}{20}$ work = B and C.

6 days : 1 day :: 1 work : $\frac{1}{6}$ work = A and C.

$\frac{1}{2}$ work = 2 A, 2 B, 2 C =

$\frac{1}{4}$ work = A, B, and C.

$$\frac{1}{4} - \frac{1}{30} = \frac{1}{15} \text{ work : 1 work :: 1 day : 15 days} = C.$$

$$\frac{1}{4} - \frac{2}{30} = \frac{1}{10} \text{ work : 1 work :: 1 day : 10 days} = A.$$

$$\frac{1}{4} - \frac{1}{6} = \frac{1}{12} \text{ work : 1 work :: 1 day : 12 days} = B.$$

$$\frac{1}{4} \text{ work : 1 work :: 1 day : 4 days} = A, B, \text{ and } C.$$

75. If A, B, and C can do the work in 4 days, they would do $\frac{1}{4}$ of it in one day. If B can do it in 12 days, he would do $\frac{1}{12}$ of it in one day. If C can do the work in 15 days, he would do $\frac{1}{15}$ of it in one day. And if B can do $\frac{1}{12}$ of it, and C $\frac{1}{15}$ of it, it is evident that they both would do $\frac{1}{12} + \frac{1}{15} = \frac{3}{20}$ of it, in a day. And if B and C do $\frac{3}{20}$, and A, B, and C do $\frac{1}{4}$, in a day, it is evident that A would do $\frac{1}{4} - \frac{3}{20} = \frac{1}{10}$ of it. If A does $\frac{1}{10}$ of it and B $\frac{1}{12}$ of it in a day, they would both do $\frac{1}{10} + \frac{1}{12} = \frac{11}{60}$ of it in a day. And if $\frac{11}{60}$ of the work be done in one day, it is evident that it will take them as many days to complete the work as 11 is contained in 60. $60 \div 11 = 5\frac{5}{11}$ days, Ans.

76. As one brick contains $2 \times 4 \times 8 = 64$ cubic inches, it is evident that it will take $1728 \div 64 = 27$ bricks for every cubic foot in the walls of the house. $46 + 28 = 74$; $74 \times 2 = 148$, distance round the house. From this sum we deduct $4 \times 1\frac{1}{2} = 6$ feet, for the corners. $148 - 6 = 142$; $142 \times 25 = 3550$; $3550 \times 1\frac{1}{2} = 5325$ cubic feet in the walls. $5325 \times 27 = 143,775$ bricks, Ans.

SECTION LV.

PARTNERSHIP, OR COMPANY BUSINESS.

(p. 224.)

2.

BY ANALYSIS.

The capital is \$1100. A's stock is \$250; his share of the loss will therefore be $\frac{250}{1100} = \frac{5}{22}$. B's stock is \$300;

his share of the loss therefore is $\frac{300}{1100} = \frac{3}{11}$. C's stock is \$550, and his share of the loss therefore is $\frac{3}{11}$ of \$550 = \$150. The loss, being 5 per cent. of the stock, is $\$1100 \times .05 = \55.00 . A's loss will therefore be $\frac{1}{2}$ of \$55 = \$12.50; B's loss $\frac{2}{11}$ of \$55 = \$15.00 and C's loss $\frac{1}{2}$ of \$55 = \$27.50 Ans.

FORM OF STATEMENT.

$$\$1100 \times .05 = \$55.00 = \text{loss.}$$

$$\begin{array}{l} \$1100 : \$55.00 :: \$250 : \$12.50 \text{ A's loss,} \\ \$1100 : \$55.00 :: \$300 : \$15.00 \text{ B's loss,} \\ \$1100 : \$55.00 :: \$550 : \$27.50 \text{ C's loss,} \end{array} \left. \vphantom{\begin{array}{l} \\ \\ \end{array}} \right\} \text{Ans.}$$

3.

BY ANALYSIS.

The capital is \$18780. C's stock being \$6780, his share of the gain will be $\frac{6780}{18780} = \frac{11}{31}$ of \$1000 = \$361.02. D's stock is \$12000; his share of the gain will therefore be $\frac{12000}{31} = \frac{3840}{31}$ of \$1000 = \$638.97. Ans.

FORM OF STATEMENT.

$$\begin{array}{l} \$18780 : \$1000 :: \$6780 : \$361.02.2\frac{1}{3} \text{ C's gain,} \\ \$18780 : \$1000 :: \$12000 : \$638.97.7\frac{1}{3} \text{ D's gain,} \end{array} \left. \vphantom{\begin{array}{l} \\ \end{array}} \right\} \text{Ans.}$$

4.

BY ANALYSIS.

M's stock is \$3000, and his share of the gain will be $\frac{3000}{10000} = \frac{3}{10}$ of \$500 = \$150. P's stock is \$2000; his share of the gain will therefore be $\frac{2000}{10000} = \frac{1}{5}$ of \$500 = \$100. Q's stock is \$5000; his share of the gain, then, will be $\frac{5000}{10000} = \frac{1}{2}$ of \$500 = \$250 Ans.

FORM OF STATEMENT.

$$\begin{array}{l} \$10000 : \$500 :: \$3000 : \$150 \text{ M's gain,} \\ \$10000 : \$500 :: \$2000 : \$100 \text{ P's gain,} \\ \$10000 : \$500 :: \$5000 : \$250 \text{ Q's gain,} \end{array} \left. \vphantom{\begin{array}{l} \\ \\ \end{array}} \right\} \text{Ans.}$$

5.

BY ANALYSIS.

The whole gain is \$332.50; but C's gain is \$120; A and B's gain, therefore, is \$332.50 — \$120 = \$212.50. A's stock being \$500, his share of the gain will be $\frac{500}{17} = \frac{1}{17}$ of \$212.50 = \$125. B's stock being \$350, his share of the gain will be $\frac{350}{17} = \frac{2}{17}$ of \$212.50 = \$87.50. As the stock of each person in the firm bears the same proportion to his gain as the other; and as A's gain is \$125, and his stock \$500; therefore,

\$125 A's gain : \$500 A's stock :: \$120 C's gain : \$480 C's stock.

Then $\$480 \div 320 = \1.50 , value of C's cloth per yard, Ans.

FORM OF STATEMENT.

$\$850 : \$212.50 :: \$500 : \125 A's gain, }
 $\$850 : \$212.50 :: \$350 : \87.50 B's gain, } Ans.
 $\$125 : \$500 :: \$120 : \480 value of C's stock.
 $\$480 \div 320 = \1.50 C's cloth per yard, Ans

6.

BY ANALYSIS.

\$5000 + \$6500 + \$7500 = \$19000 amount of stock.

\$19000 \times .40 = \$7600 gross gain.

\$7600 \times .90 = \$6840 net gain.

$\frac{5000}{19000} = \frac{5}{19}$ of \$6840 = \$1800 A's gain, }
 $\frac{6500}{19000} = \frac{13}{38}$ of \$6840 = \$2340 B's gain, } Ans.
 $\frac{7500}{19000} = \frac{15}{38}$ of \$6840 = \$2700 C's gain, }

FORM OF STATEMENT.

$\$19000 : \$6840 :: \$5000 : \1800 A's gain, }
 $\$19000 : \$6840 :: \$6500 : \2340 B's gain, } Ans.
 $\$19000 : \$6840 :: \$7500 : \2700 C's gain, }

7.

BY ANALYSIS.

Amount of debts, \$600 + \$760 + \$840 + \$800 = \$3000.

For every dollar, then, each creditor will receive $\frac{3000}{120} = \$25$.

A will receive $\frac{91}{120}$ of \$600 = \$455.00,
 B will receive $\frac{91}{120}$ of \$760 = \$576.33 $\frac{1}{3}$,
 C will receive $\frac{91}{120}$ of \$840 = \$637.00,
 D will receive $\frac{91}{120}$ of \$800 = \$606.66 $\frac{2}{3}$,

} Ans.

FORM OF STATEMENT.

\$3000 : \$2275 :: \$600 : \$455.00 A receives,
 \$3000 : \$2275 :: \$760 : \$576.33 $\frac{1}{3}$ B receives,
 \$3000 : \$2275 :: \$840 : \$637.00 C receives,
 \$3000 : \$2275 :: \$800 : \$606.66 $\frac{2}{3}$ D receives,

} Ans.

8.

BY ANALYSIS.

As the bankrupt owes \$5000, and his effects are only \$4000, he will pay on each dollar $\frac{4000}{5000} = \frac{4}{5} = \0.80 Ans.

FORM OF STATEMENT.

\$5000 : \$4000 :: \$1.00 : \$0.80 Ans.

9.

BY ANALYSIS.

As \$1728 is $\frac{15}{100}$ of the sum owed, that sum must be $\frac{100}{15}$ of \$1728 = \$11520 Ans.

FORM OF STATEMENT.

\$0.15 : \$100 :: \$1728 : \$11520 Ans.

SECTION LVI.

PARTNERSHIP ON TIME.

(p. 226.)

2.

BY ANALYSIS.

\$3200 for 12 months, is the same as \$38400 for 1 month; and \$4200 for 8 months, is the same as \$33600 for 1 month. Therefore the whole stock may be considered $\$38400 + \$33600 = \$72000$. A's share of the profit will therefore be $\frac{\$38400}{\$72000} = \frac{8}{15}$ of \$240 = \$128; B's share will be $\frac{\$33600}{\$72000} = \frac{7}{15}$ of \$240 = \$112 Ans.

FORM OF STATEMENT.

$$\$3200 \times 12 = \$38400 \text{ A's product.}$$

$$\$4200 \times 8 = \$33600 \text{ B's product.}$$

$$\$72000$$

$$\begin{array}{l} \$72000 : \$240 :: \$38400 : \$128 \text{ A's gain, } \\ \$72000 : \$240 :: \$33600 : \$112 \text{ B's gain, } \end{array} \left. \vphantom{\begin{array}{l} \\ \end{array}} \right\} \text{Ans.}$$

BY ANALYSIS.

3. \$300 for 5 months, is the same as \$1500 for 1 month; \$400 for 8 months, is the same as \$3200 for 1 month; \$500 for 3 months, is the same as \$1500 for 1 month. The capital, then, may be considered $\$1500 + \$3200 + \$1500 = \6200 . A's share of the gain will therefore be $\frac{\$1500}{\$6200} = \frac{15}{62}$ of \$100 = \$24.19 $\frac{1}{4}$; B's share, $\frac{\$3200}{\$6200} = \frac{32}{62}$ of \$100 = \$51.61 $\frac{2}{3}$; C's share, $\frac{\$1500}{\$6200} = \frac{15}{62}$ of \$100 = \$24.19 $\frac{1}{4}$ Ans.

FORM OF STATEMENT.

$$\$300 \times 5 = \$1500$$

$$\$400 \times 8 = \$3200$$

$$\$500 \times 3 = \$1500$$

$$\$6200$$

$$\begin{array}{l} \$6200 : \$100 :: \$1500 : \$24.19\frac{1}{3} \text{ A's gain,} \\ \$6200 : \$100 :: \$3200 : \$51.61\frac{2}{3} \text{ B's gain,} \\ \$6200 : \$100 :: \$1500 : \$24.19\frac{1}{3} \text{ C's gain,} \end{array} \left. \vphantom{\begin{array}{l} \\ \\ \end{array}} \right\} \text{Ans.}$$

4. 24 oxen for 8 weeks, is 1 ox for 192 weeks; 18 oxen for 12 weeks, is 216 oxen for 1 week; and 12 oxen for 10 weeks, is 1 ox for 120 weeks. The amount of pasturing is $192 + 216 + 120 = 528$ weeks. A's share is $\frac{192}{528} = \frac{4}{11}$ of $\$26.40 = \9.60 ; B's share is $\frac{216}{528} = \frac{3}{22}$ of $\$26.40 = \10.80 ; C's share is $\frac{120}{528} = \frac{5}{22}$ of $\$26.40 = \6.00 Ans.

FORM OF STATEMENT.

$$24 \text{ oxen} \times 8 = 192 \text{ oxen};$$

$$18 \text{ oxen} \times 12 = 216 \text{ oxen};$$

$$12 \text{ oxen} \times 10 = 120 \text{ oxen};$$

$$528 \text{ oxen.}$$

$$\begin{array}{l} 528 : \$26.40 :: 192 : \$9.60 \text{ what A pays,} \\ 528 : \$26.40 :: 216 : \$10.80 \text{ what B pays,} \\ 528 : \$26.40 :: 120 : \$6.00 \text{ what C pays,} \end{array} \left. \vphantom{\begin{array}{l} \\ \\ \end{array}} \right\} \text{Ans.}$$

5. The "stock in trade" is a carriage to ride 144 miles; and the expense for the carriage, \$25, may be considered the "loss," and the proportional part which each rode, the *time*. Now, by the Rule, each man is to bear his share of the loss (expense) in proportion as he has the use of the stock in trade (carriage). The two men had the use of the whole stock in trade for the first 20 miles, for which they pay $\frac{20}{144}$ of $\$25 = \$3.47.2\frac{2}{3}$; therefore, the share of each, for this distance, is $\frac{1}{2}$ of $\$3.47.2\frac{2}{3} = \$1.73.6\frac{1}{2}$. For the next 52

miles the carriage was occupied by the two gentlemen and A. The expense of the carriage for this distance was $\$9.02.7\frac{1}{2}$, it being $\frac{52}{144}$ of $\$25$, of which each paid $\frac{1}{3} = \$3.00.9\frac{1}{27}$. For the next 42 miles, there were four passengers, viz. the two gentlemen, and A and B. The expense for this distance was $\frac{42}{144}$ of $\$25 = \$7.29.1\frac{1}{3}$, and each of the four passengers paid $\$1.82.2\frac{1}{12}$. For the remaining part of the distance, 30 miles, the expense was $\frac{30}{144}$ of $\$25 = \$5.20.8\frac{1}{3}$; and as C has been received into the carriage, each person bears $\frac{1}{3}$ of the expense for this distance, $\$1.04.1\frac{1}{3}$. Thus we perceive that each of the two gentlemen pays $\$1.73.6\frac{1}{3} + \$3.00.9\frac{1}{27} + \$1.82.2\frac{1}{12} + \$1.04.1\frac{1}{3} = \$7.60.9\frac{1}{108}$; A pays $\$3.00.9\frac{1}{27} + \$1.82.2\frac{1}{12} + \$1.04.1\frac{1}{3} = \$5.87.3\frac{1}{108}$; B pays $\$1.82.2\frac{1}{12} + \$1.04.1\frac{1}{3} = \$2.86.4\frac{1}{12}$; C pays $\$1.04.1\frac{1}{3}$ Ans.

FORM OF STATEMENT.

$$\frac{20}{144} \times \frac{1}{2} + \frac{52}{144} \times \frac{1}{3} + \frac{42}{144} \times \frac{1}{4} + \frac{30}{144} \times \frac{1}{5} = \frac{526}{1728}, \text{ first man's product.}$$

$$\frac{20}{144} \times \frac{1}{2} + \frac{52}{144} \times \frac{1}{3} + \frac{42}{144} \times \frac{1}{4} + \frac{30}{144} \times \frac{1}{5} = \frac{526}{1728}, \text{ 2d man's product.}$$

$$\frac{52}{144} \times \frac{1}{3} + \frac{42}{144} \times \frac{1}{4} + \frac{30}{144} \times \frac{1}{5} = \frac{406}{1728}, \text{ A's prod.}$$

$$\frac{42}{144} \times \frac{1}{4} + \frac{30}{144} \times \frac{1}{5} = \frac{198}{1728}, \text{ B's prod.}$$

$$\frac{30}{144} \times \frac{1}{5} = \frac{72}{1728}, \text{ C's prod.}$$

$$\frac{1728}{1728}, \text{ sum of the products.}$$

$$\left. \begin{array}{l} 1728 : \$25 :: \frac{526}{1728} : \$7.60.9\frac{1}{108}, \text{ first man's expense,} \\ 1728 : \$25 :: \frac{526}{1728} : \$7.60.9\frac{1}{108}, \text{ 2d man's expense,} \\ 1728 : \$25 :: \frac{406}{1728} : \$5.87.3\frac{1}{108}, \text{ A's expense,} \\ 1728 : \$25 :: \frac{198}{1728} : \$2.86.4\frac{1}{12}, \text{ B's expense,} \\ 1728 : \$25 :: \frac{72}{1728} : \$1.04.1\frac{1}{3}, \text{ C's expense,} \end{array} \right\} \text{ Ans.}$$

6. $\$4000$ for 4 months, is $\$100$ for 160 months. $\$4000 + \$500 = \$4500$ for 12 months, is $\$100$ for 540 months; and $\$4500 - \$1000 = \$3500$ for 4 months, is $\$100$ for 140 months. A may therefore be considered as

having \$100 in trade $160 + 540 + 140 = 840$ months. Again; \$3000 for 10 months, is \$100 for 300 months. $\$3000 - \$1500 = \$1500$ for 4 months, is \$100 for 60 months. $\$1500 + \$3000 = \$4500$ for 6 months, is \$100 for 270 months. B may therefore be considered as having \$100 in trade for $300 + 60 + 270 = 630$ months. Again, \$2000 for 6 months, is \$100 for 120 months. $\$2000 + \$2000 = \$4000$ for 8 months, is \$100 for 320 months. $\$4000 + \$2000 = \$6000$ for 2 months, is \$100 for 120 months. $\$6000 - \$1500 = \$4500$ for 4 months, is \$100 for 180 months. C may therefore be considered as having \$100 in trade $120 + 320 + 120 + 180 = 740$ months. The sum of A, B, and C's time is $840 + 630 + 740 = 2210$ months. A's share of the gain will therefore be $\frac{840}{2210}$ of \$4420 = \$1680; B's share, $\frac{630}{2210}$ of \$4420 = \$1260; C's share $\frac{740}{2210}$ of \$4420 = \$1480 Ans.

FORM OF STATEMENT.

$$\begin{array}{r} \$4000 \times 4 = 16000 \\ \underline{500} \end{array}$$

$$\begin{array}{r} 4500 \times 12 = 54000 \\ \underline{1000} \end{array}$$

$$\begin{array}{r} 3500 \times 4 = 14000 \\ \underline{\quad} \end{array}$$

$$\text{A's product} = 84000$$

$$\begin{array}{r} \$2000 \times 6 = 12000 \\ \underline{2000} \end{array}$$

$$\begin{array}{r} 4000 \times 8 = 32000 \\ \underline{2000} \end{array}$$

$$\begin{array}{r} 6000 \times 2 = 12000 \\ \underline{1500} \end{array}$$

$$\begin{array}{r} 4500 \times 4 = 18000 \\ \underline{\quad} \end{array}$$

$$\text{C's product} = 74000$$

$$\begin{array}{r} \$3000 \times 10 = 30000 \\ \underline{1500} \end{array}$$

$$\begin{array}{r} 1500 \times 4 = 6000 \\ \underline{3000} \end{array}$$

$$\text{B's product} = 63000$$

$$\text{A's product, } 84000$$

$$\text{B's product, } 63000$$

$$\text{C's product, } 74000$$

$$\underline{221000}$$

$$\begin{array}{l}
 \$221000 . \$4420 :: \$84000 : \$1680 \text{ A's gain,} \\
 \$221000 : \$4420 :: \$63000 : \$1260 \text{ B's gain,} \\
 \$221000 : \$4420 :: \$74000 : \$1480 \text{ C's gain,}
 \end{array}
 \left. \vphantom{\begin{array}{l} \\ \\ \end{array}} \right\} \text{Ans.}$$

7. \$4000 for 6 months, is \$100 for 240 months. \$4000 — \$2000 = \$2000 for 18 months, is \$100 for 360 months. Jones may therefore be considered as having \$100 in trade for $240 + 360 = 600$ months. \$3500 for 8 months, is \$100 for 280 months. \$3500 — 1500 = \$2000 for 16 months, is \$100 for 320 months. Eaton, then, may be considered as having \$100 in trade $280 + 320 = 600$ months. \$2500 for 10 months, is \$100 for 250 months. \$2500 + \$2000 = \$4500 for 14 months, is \$100 for 630 months. Brown, then, may be considered as having \$100 in trade $250 + 630 = 880$ months. As each man is supposed to have the same capital, his share of the gain will be in proportion to the *time* his \$100 has been in trade.

The sum of all their times is $600 + 600 + 880 = 2080$ months.

$$\begin{array}{l}
 \text{Jones's gain will be } \frac{600}{2080} \text{ of } \$1041.80 = \$300.51\frac{1}{3} \\
 \text{Eaton's gain will be } \frac{600}{2080} \text{ of } \$1041.80 = \$300.51\frac{1}{3} \\
 \text{Brown's gain will be } \frac{880}{2080} \text{ of } \$1041.80 = \$440.76\frac{2}{3}
 \end{array}
 \left. \vphantom{\begin{array}{l} \\ \\ \end{array}} \right\} \text{Ans.}$$

FORM OF STATEMENT.

$\begin{array}{r} \$4000 \times 6 = 24000 \\ \underline{2000} \\ 2000 \times 18 = 36000 \\ \hline \text{Jones's product} = 60000 \end{array}$	$\begin{array}{r} \$3500 \times 8 = 28000 \\ \underline{1500} \\ 2000 \times 16 = 32000 \\ \hline \text{Eaton's product} = 60000 \end{array}$

SECTION LVIII.

PROFIT AND LOSS.

10. (p. 232.) $\$ 7.00 : \$ 6.12,5 :: \$ 100 : \$ 87.50 ; \$ 100 - \$ 87.50 = \$ 12.50$ per cent. Ans.
11. $\$ 1.00 - .12,5 = .87,5 ; \$ 7.00 \times .87,5 = \$ 6.12\frac{1}{2}$ Ans.
12. $\$ 3.60 \times 1.12\frac{1}{2} = \$ 4.05$ Ans.
13. $\$ 4.05$ is $\frac{100}{112\frac{1}{2}}$ of the original cost; therefore, $\frac{100}{112\frac{1}{2}}$ of 4.05 = $\$ 3.60$ Ans.
14. $\$ 8.50 \times 1.10 = \$ 9.35$ Ans.
15. $\$ 9.35 \div 1.10 = \$ 8.50$ Ans.
16. $\$ 1.00 - .15 = .85 ; \$ 1.25 \div .85 = \$ 1.47\frac{1}{7} ; \$ 1.47\frac{1}{7} \times 1.12 = \$ 1.64,7\frac{1}{7}$ Ans.
17. $\$ 1.00 - .15 = .85 ; \$ 1.25 \div .85 = \$ 1.47\frac{1}{7}$, value of the cloth; $\$ 1.64,7\frac{1}{7} - \$ 1.47\frac{1}{7} = \$ 0.17,6\frac{2}{7} ; \$ 1.47\frac{1}{7} : \$ 0.17,6\frac{2}{7} :: \$ 100 : \$ 12$ per cent. Ans.
18. As 12 per cent. was gained on the cloth, $\frac{112}{100}$ of $\$ 1.64,7\frac{1}{7} = \$ 1.47\frac{1}{7}$, cost; and $\frac{25}{100} \times \$ 1.47\frac{1}{7} = \$ 1.25$, price for which it is sold, Ans.
19. $\$ 1.64,7\frac{1}{7} \div 1.12 = \$ 1.47\frac{1}{7} - \$ 1.25 = \$ 0.22\frac{1}{7} ; \$ 1.47\frac{1}{7} : \$ 0.22\frac{1}{7} :: \$ 100 : \$ 15$ per cent. Ans.
20. $\$ 0.90 : \$ 1.20 :: \$ 100 : \$ 133\frac{1}{3} - \$ 100 = \$ 33\frac{1}{3}$ per cent.; $\$ 1.12\frac{1}{2} : \$ 1.50 :: \$ 100 : \$ 133\frac{1}{3} - \$ 100 = \$ 33\frac{1}{3}$ per cent. Both have gained $\$ 33\frac{1}{3}$ per cent. Ans.
21. The present worth of 13 cents due 8 months hence is $13 \div 1.04 = .12\frac{1}{2}$ cents. If, therefore, the cotton cost $12\frac{1}{2}$ cents, and is sold for 12 cents, on each yard there is lost $.125 - .12 = .005 = \frac{1}{200} = \frac{1}{25} = .04 = 4$ per cent Ans.

22. $\$2.50 \times 24 = \60.00 , price sold at. As the cloth was sold at $7\frac{1}{2}$ per cent. loss, it is evident $\$60.00$ is $\frac{92\frac{1}{2}}{100}$ of the cost; therefore, $\frac{100}{92\frac{1}{2}}$ of $\$60.00 = \$64.86,4\frac{3}{4}$ is the cost, Ans.
23. It is evident, if $7\frac{1}{2}$ per cent. be taken from any sum, $92\frac{1}{2}$ per cent. will remain; therefore, $.92\frac{1}{2} \times \$64.86,4\frac{3}{4} = \60 , price sold at; $\$60.00 \div 24 = \2.50 per yard, Ans.
24. By the last question, we perceive, that, if $7\frac{1}{2}$ per cent. be lost on $\$64.86,4\frac{3}{4}$, $\$60$ will be left; and if this be divided by $\$2.50$, we shall have the number of yards; thus, $\$60 \div \$2.50 = 24$ yards, Ans.
25. $\$64.86,4\frac{3}{4}$ was given for the cloth, and $\$2.50 \times 24 = \60.00 was received for it; therefore the loss was $\$64.86,4\frac{3}{4} - \$60.00 = \$4.86,4\frac{3}{4}$, or $\frac{4864\frac{3}{4}}{60000}$ of its value, $= .075 = 7\frac{1}{2}$ per cent. Ans.
26. If 17 per cent. be added to any sum, it is evident the original sum must be $\frac{100}{117}$ of the amount; therefore, $\frac{100}{117}$ of $\$12.50 = \$10.68,3\frac{2}{117}$ = the first cost, Ans.
27. If, on any sum, 25 per cent. has been lost, the original sum must have been $\frac{100}{75}$ of it. Therefore, $\frac{100}{75}$ of $\$75 = \100 was the price of the horse. But his real value was $\$100 \times 1.30 = \130 ; therefore he was sold for $\$130 - \$75 = \$55$ less than his value, Ans.
28. As the horse was worth 30 per cent. more than was given for him, and as he was sold for 25 per cent. less than he cost, these relative prices may be expressed thus: $\frac{130}{100}$, $\frac{75}{100}$; and their difference thus: $\frac{130}{100} - \frac{75}{100} = \frac{55}{100}$. Therefore, $\frac{55}{100} : \frac{75}{100} :: \$55 : \$75$ Ans.
29. $\$.42 \times .95 = \$0.39,9$ Ans.
30. 63gal. — 15gal. = 48gal. remaining; $\$112 \div 48 = \$2.33\frac{1}{3} \times .95 = \$2.21,6\frac{2}{3}$ Ans.
31. $\$112 \times .95 = \106.40 received for the molasses; $\$106.40 \div \$2.21,6\frac{2}{3} = 48$ gal. remaining; 63gal. — 48gal. = 15gal. leaked out, Ans.

32. 63gal. — 15gal. = 48gal. left; $\$ 2.21,6\frac{2}{3} \times 48 = \$ 106.40$;
 $\$ 106.40 \div .95 = \$ 112$ Ans.
33. 63gal. — 15gal. = 48gal.; $\$ 2.21,6\frac{2}{3} \times 48 = \$ 106.40$,
 price sold at; $\$ 112 - \$ 106.40 = \$ 5.60$, loss; $\$ 112$
 $: \$ 5.60 :: \$ 100 : \$ 5$ loss per cent. Ans.
34. $\$ 5.60 \div .93 = \$ 6.02\frac{1}{4}$ value per yard; $\$ 6.25 -$
 $\$ 6.02\frac{1}{4} = \$ 0.22\frac{1}{2}$ gain on each yard; and $\frac{22\frac{1}{2}}{602\frac{1}{4}}$
 $= \frac{17}{448} = .038\frac{1}{8} = 3\frac{1}{12}\%$ gain per cent. Ans.
 Or, $\$ 6.02\frac{1}{4} : \$ 0.22\frac{1}{2} :: \$ 100 : 3\frac{1}{12}\%$ gain per cent.
 Ans.
35. $\$ 35 \div 1.04 = \$ 33.65,3\frac{1}{3}$ present worth of $\$ 35$;
 $\$ 33.65,3\frac{1}{3} - \$ 30 = \$ 3.65,3\frac{1}{3}$ gain, Ans.
36. $\$ 1.25 \div .75 = \$ 1.66\frac{2}{3}$, value of the tea; $\$ 1.66\frac{2}{3} -$
 $\$ 1.40 = \$ 0.26\frac{2}{3}$ loss per pound. Therefore, $\frac{26\frac{2}{3}}{166\frac{2}{3}} =$
 $\frac{2}{15} = .16 = \$ 16$ per cent. loss, Ans.
 Or, $\$ 1.66\frac{2}{3} : \$ 0.26\frac{2}{3} :: \$ 100 : \$ 16$ per cent. loss, Ans.
37. $\$ 1.35 \times .88 = \$ 1.18,8$, price for $\frac{1}{3}$ in ready money;
 $\$ 1.18,8 : \$ 1.00 :: \$ 5.00 : \$ 4.20\frac{2}{3}$, cash price of 1
 yard; $\$ 1.18,8 \times 50 = \$ 59.40$, value of the indigo.
 $\$ 59.40 \div 3 = \$ 19.80$; $\$ 59.40 - \$ 19.80 = \$ 39.60$;
 $\$ 39.60 \div \$ 5.00 = 7\frac{2}{5}$ yards delivered by B, Ans.

38. $\frac{1}{16} \times \frac{1}{16} = \frac{1}{16} : 1^2 \text{ in.} :: 450 \text{ lb.} : 45000 \text{ lb.}$ Ans.

39. Let A B represent the height of the tree, E the top of the stump, C the point on which the top of the tree will fall. As the tree will rest on the stump, it is evident that A E will be equal to C E. By drawing D E at right angles to A C, it is evident that A D will be equal to D C; that is, the line A C is bisected in D; therefore we have two similar triangles, A B C and A D E. This is evident from the fact, that each of these triangles has one right angle, and that the angle A is common to both triangles. Therefore as A B is to A C, so is A D to A E. If, then, we take A E from A B, the remainder E B will be the answer required.

OPERATION.

A B is 80 and B C is 40; therefore A C will be equal to the square root of the sum of the squares of A B and B C; that is $80^2 + 40^2 = 6400 + 1600 = 8000$; $\sqrt{8000} = 89.44+$ = A C; A D will, therefore, be $44.72+$. Then, as $80 : 89.44 :: 44.72+ : 49.9+$, and if the fractions could all have been taken into the above operation, the fourth term would have been 50 feet. Therefore, $80 - 50 = 30$ feet, Ans.

BY ALGEBRA.

Let x represent B E, $80 - x = C E$, and $40 = C B$. Then $80 - x - x^2 = 40^2$; $6400 - 16x + x^2 - x^2 = 1600$. And $160x = 6400 - 1600 = 4800$.
 $x = 30$ feet = B E, Ans.

40. Circles being to each other as the squares of their diameters, they are also to each other as the squares of their semidiameters. The grindstone being 48 inches in diameter, its semidiameter will be 24 inches. $24 \times 24 = 576 \div 4 = 144$; $576 - 144 = 432$, $\sqrt{432} = 20.78$ = to the semidiameter that will be left after A has ground off his share; therefore his share will be $24 - 20.78 = 3.22$ in.; $432 - 144 = 288$; $\sqrt{288} = 16.97$; $20.78 - 16.97 = 3.81$ in., B's share; $288 - 144 = 144$; $\sqrt{144} = 12$ in.; $16.97 - 12 = 4.97$ in., C's share; $\sqrt{144} = 12$ in., D's share, Ans.

41. $160 \div .785398 = 203.71836$; $\sqrt{203.71836} = 14.273+$; $14.273 \div 2 = 7.136+$ rods, Ans.

42. We first find the number of square feet in an acre, $160 \times 272\frac{1}{2} = 43560$ feet. If we extract the square root of this number we obtain the side of a square field, that will contain an acre; thus, $\sqrt{43560} = 208.712+$ feet. We now divide this number by 3.5 feet, and obtain $59.632+$, the number of divisions in the first row. We perceive, therefore, that there will be 60 hills, there being one more hill than divisions. Now, if we divide $208.712+$ by 59, the quotient will be 3.537 feet;

that is, the hills in the first row may be 3.537 feet apart, instead of 3.5 feet. Thus, our first row will contain 60 hills, which will be 3.537 feet apart. Our next row will contain but 59 hills, the hills being planted in the quincunx order, thus:—

To find the distance between the rows, we square $3.5 = 12.25$; we then take half of $3.537 = 1.768$, which we square $= 3.125824$; we subtract this last number from 12.25 and obtain 9.124176. The square root of this number is 3.0206 feet, equal the distance between the rows. Now, if we divide $208.712 \div$ by 3.0206, we obtain $69 \div$; therefore, the number of rows will be 70. To obtain the number of hills in the field, we multiply 70 by $60 = 4200$. But as there are 70 rows, and as half of the rows contain only 59 hills, we subtract 35 from 4200. Thus, $4200 - 35 = 4165$ hills, Ans.

43. The pupil, to understand this problem, will first obtain the number of feet in the diameter of the garden; $10 \times 16.5 = 165$ feet; $165 - 5 = 160$. The trees are, therefore, to be set on a piece of ground 160 feet in diameter. Let the pupil place 1 tree in the centre of the garden, around this let him place 6 other trees, at the distance of 10 feet from each other; he will then perceive, that they stand in a hexagonal form. Let him enlarge this hexagon by placing another row of trees around it at the distance of 10 feet each; and this will require 12 additional trees. If we examine this hexagon, we shall find that each side of it contains 3 trees. Let us enlarge this hexagon, by placing another row of trees around it, and we shall find it will require 18 trees, and that each side of the hexagon contains 4 trees. We continue thus to enlarge the hexagon, until we have set 8 rows round the centre tree. Each side of the hexagon will then contain 9 trees. To compute the number of trees in the hexagon, we find the number of trees that compose the periphery of the first hex-

gon to be 6 trees; and the number that compose the periphery of the larger hexagon to be 48. We therefore add 6 to 48, and multiply the sum by the half of $8 = 4$; thus, $6 + 48 = 54$; $54 \times 4 = 216$. To this we add the tree in the centre, $216 + 1 = 217$. If we now examine our figure, we find we can set 4 more trees at the base of each side of the hexagon, within the limits of the prescribed field. Therefore, 4 times $6 = 24$, to be added to 217, thus $217 + 24 = 241$ trees, Ans.

44. $49\frac{1}{2}$ feet $= 49.625$ feet; $49.625 \times 144 = 7146$ square inches; $1.5 \times 1.5 \times 2 = 4.5$; $7146 - 4.5 = 7141.5$; $7141.5 \div 6 = 1190.25$; $\sqrt{1190.25} = 34.5$; $34.5 + 1.5 = 36$ inches, Ans.

To understand the operation of this question, we will take six small square pieces of board, each of the same dimensions, and with these we will construct a cubic box; but, in so doing, we shall find that we need two small cubes, each of which is of the thickness of the board or plank used.

Now, if the box, after being completed, was a cube, whose sides measured 36 inches each, and if the board was $1\frac{1}{2}$ inches thick, it would require 7146 square inches of the board to make the box, as the pupil can readily perceive.

But our box was made of six square pieces of board and two small cubes, each measuring, in the present case, $1\frac{1}{2}$ inches square. If we deduct the contents of these two squares, $= 1.5 \times 1.5 \times 2 = 4.5$ square inches, from the superficial contents of the board, $= 7146$ inches, we have $7146 - 4.5 = 7141.5$ square inches remaining; and if we divide these inches by 6, we have the superficial contents of one of the square boards of which we make our box. Thus, $7141.5 \div 6 = 1190.25$. The square root of this number, $\sqrt{1190.25} = 34.5$, will be the width of each board. To this number we must add the thickness of the board, 1.5 inches, and we have the answer, $34.5 + 1.5 = 36$ inches.

45. $22\frac{7}{2}$ feet = $22\frac{7}{2} \times .144 = 3242$ square inches;
 $2.5 \times 2.5 = 6.25$ inches; $3242 - 6.25 = 3235.75$; $3235.75 \div 7 = 462.25$; $\sqrt{462.25} = 21.5$; $21.5 + 2.5 = 24$ inches,
 the width of the box; $24 \div 2 = 12$ inches, the height; $24 \times 2 = 48$ inches, the length.

From each of these numbers we subtract 5 inches, the thickness of the two sides of the box; $12 - 5 = 7$; $24 - 5 = 19$; $48 - 5 = 43$. The inside dimensions of the box will, therefore, be 7, 19, and 43 inches, and its contents will therefore, be $7 \times 19 \times 43 = 5719$ cubic inches, Ans.

To understand the above operation, we will construct a box, that shall be twice as wide as its height, and twice as long as its width. With the materials used to construct this box, the pupil will find that he can construct a cubical box, whose sides will measure half the length of the former box. And, if it be constructed as the box in question 44, there will be material remaining sufficient to make one of the sides, after deducting the square of the thickness of the plank. Thus, if our box was 12 inches high, 24 inches wide, and 48 inches long, and was made of a plank $2\frac{1}{2}$ inches thick, it would require one whose superficial contents were 3242 inches. From this sum we deduct the square of the thickness of the plank, $2.5 \times 2.5 = 6.25$ inches, $3242 - 6.25 = 3235.75$ inches. This sum, as we have before shown, is sufficient, not only to construct the cubical box, but there will be sufficient remaining, wanting the square of the thickness of the plank, to make another, similar to one of the six squares of which we made the box. This will be evident, if the box be cut into two parts and one of them placed on the other. Therefore, we divide 3235.75 by 7, because there are materials sufficient for 7 squares, and the quotient is 462.25. The square root of this number is the length of one of the squares of which the box is made. $\sqrt{462.25} = 21.5$ inches. To this number we add the thickness of the plank, and we have the width

of the required box. $21.5 \div 2.5 = 24$ inches, width of the box; $24 \div 2 = 12$ inches, height, and $24 \times 2 = 48$ inches, length, Ans.

To find the feet in height that each must take, we adopt the following rule, and say, As the relative value of all their shares is to the relative value of each share, so is the cube of the height of the pyramid or stack to the cube of the height

of each man's part of the stack. But we are to compute from the top of the stack each time, and then subtract as in the following process : —

$16 \times 16 \times 16 = 4096$ feet, cube of the height of the stack.
 $436.8 : 118.8 :: 4096 : 1114.02197$; $\sqrt[3]{1114.02197} = 10.366 +$ feet in height for Pierce.

$436.8 : 118.8 + 108 = 226.8 :: 4096 : 2126.76923076$;
 $\sqrt[3]{2126.76923076} = 12.859 +$ from the top of the stack.
 From this number we subtract the height of Pierce's stack,
 $12.859 - 10.366 = 2.493$ feet, for the height of Rowe's stack.

$436.8 : 118.8 + 108 + 100 = 326.8 :: 4096 : 3064.49816849$;
 $\sqrt[3]{3064.49816849} = 14.525$ feet from the top of the stack.
 From this we subtract the height of the other two stacks ;
 $14.525 - 12.859 = 1.666$ feet for the height of Wells's stack.

If, from the height of the stack, 16 feet, we subtract the last root, we have the remaining height of the stack for Northend ;
 thus, $16 - 14.525 + = 1.474$ feet, height of Northend's stack.

NOTE. — The decimals in the answer to the above question will vary according to the degree of accuracy required.

A GENERAL RULE FOR EXTRACTING THE ROOTS OF ALL POWERS.

$$\begin{array}{l} \text{lb.} \quad \text{lb.} \quad \text{lb.} \quad \text{lb.} \\ 30 : 200 :: 5 : 33\frac{1}{3} \text{ at } 8\text{cts.} \\ 30 : 200 :: 5 : 33\frac{1}{3} \text{ at } 10\text{cts.} \\ 30 : 200 :: 5 : 33\frac{1}{3} \text{ at } 12\text{cts.} \\ 30 : 200 :: 15 : 100 \text{ at } 20\text{cts.} \end{array} \left. \vphantom{\begin{array}{l} 30 : 200 :: 5 : 33\frac{1}{3} \text{ at } 8\text{cts.} \\ 30 : 200 :: 5 : 33\frac{1}{3} \text{ at } 10\text{cts.} \\ 30 : 200 :: 5 : 33\frac{1}{3} \text{ at } 12\text{cts.} \\ 30 : 200 :: 15 : 100 \text{ at } 20\text{cts.} \right\} \text{Ans}$$

SECTION LXX.

PERMUTATIONS AND COMBINATIONS.

2. (p. 280.) $1 \times 2 \times 3 \times 4 \times 5 \times 6 \times 7 \times 8 \times 9 \times 10 = 3628800$ days, Ans.
3. $1 \times 2 \times 3 \times 4 \times 5 \times 6 \times 7 \times 8 \times 9 \times 10 \times 11 \times 12 = 479001600$ changes. $365\text{d. } 5\text{h. } 49\text{m.} = 525949$ minutes; $479001600 \div 10 = 47900160$ minutes; $47900160 \div 525949 = 91\text{y. } 38801\text{m.} = 91\text{y. } 26\text{d. } 22\text{h. } 41\text{m.}$ Ans.
4. $1 \times 2 \times 3 \times 4 \times 5 \times 6 \times 7 \times 8 \times 9 \times 10 \times 11 \times 12 \times 13 \times 14 \times 15 \times 16 \times 17 \times 18 \times 19 \times 20 \times 21 \times 22 \times 23 \times 24 \times 25 \times 26 = 403291461126605635584000000$ changes, Ans.
6. $26 \times 25 \times 24 \times 23 \times 22 \times 21 = 165765600$ words, Ans.
10. $6 \times 8 \times 9 \times 9 = 3888$ choices, Ans.
11. $6 \times 6 \times 6 \times 6 \times 6 = 7776$ changes, Ans.

SECTION LXXI.

LIFE INSURANCE.

3. (p. 285.) $\$78.00 \times .0497 = \3876.60 Ans.
4. $\$2000 \times .0088 = \17.60 Ans.
5. $\$12,000 \times .0373 = \447.60 ; $\$447.60 \times 3 = \1342.80 ; $\$12,000 - \$1342.80 = \$10,657.20$ Ans.
6. As Swan died when he was 60 years old, his life was insured 40 years. The amount of an annuity of \$1 for 40 years is \$154.761966. (See National Arithmetic, page 271.) The insurance for \$10,000 for one year is $\$10,000 \times .0177 = \177 ; and the amount of the annuity of \$177 for 40 years is $\$154.761966 \times 177 = \$27,392.86$. From this we subtract the sum which the Company pays to the heirs of Swan, $\$27,392.86 - \$10,000 = \$17,392.86$ Ans.

SECTION LXXII.

SINGLE POSITION.

2. (p. 286.) BY ANALYSIS. — If $\frac{1}{3}$ and $\frac{1}{4}$ of any number be taken, $\frac{5}{12}$ will remain; and if 60 be $\frac{5}{12}$ of a number, 12 will be $\frac{1}{12}$; and if 12 be $\frac{1}{12}$, 12 twelfths will be 144, Ans.

3. BY ANALYSIS. — If any number be increased $\frac{1}{2}$, $\frac{1}{3}$, and $\frac{1}{4}$ of itself, the number will be $2\frac{1}{12}$, or $\frac{25}{12}$ of itself; and if $\frac{25}{12}$ of a number be 125, $\frac{1}{12}$ will be 5, and $\frac{1}{2}$ will be 60, Ans.

4. BY ANALYSIS. — B's age is $\frac{1}{2}$ of A's, and C's age is $\frac{1}{3}$ of $\frac{1}{2} = \frac{1}{6}$ of A's. These fractions, then, $\frac{1}{2}$, $\frac{1}{3}$, and $\frac{1}{6}$, will express the relative proportion of their ages. The sum of these numbers is $\frac{1}{2} + \frac{1}{3} + \frac{1}{6} = \frac{2}{3}$. If $\frac{2}{3}$ be 140, $\frac{3}{2}$ will be 84 = A's age; B's age will therefore be $\frac{1}{2}$ of 84 = 42; C's age will be $\frac{1}{3}$ of 42 = 14 Ans.

5. BY ANALYSIS. — Any sum, at 6 per cent. simple interest, will, in 10 years, amount to $1\frac{3}{5}$ of itself; thus, \$100 $\times .06 = \$6$; $6 \times 10 = \$60$; $60 + 100 = \$160$; $\frac{160}{100} = 1\frac{3}{5}$; and if \$560 be $\frac{3}{5}$, \$70 will be $\frac{1}{5}$, and $\frac{1}{5}$ will be \$350 Ans.

6. BY ANALYSIS. — $\frac{2}{3}$ of any number is $\frac{2}{3}$ more than $\frac{1}{3}$ of it; thus, $\frac{2}{3} - \frac{1}{3} = \frac{1}{3}$; and if $\frac{2}{3}$ be 81, $\frac{1}{3}$ will be $\frac{81}{2}$, and $\frac{1}{3}$ will be $\frac{81}{2} \times \frac{1}{1} = \frac{81}{2} = 40\frac{1}{2}$ Ans.

7. BY ANALYSIS. — The difference between $\frac{2}{3}$ and $\frac{1}{4}$ is $\frac{5}{12}$; and if $\frac{5}{12}$ of a number be $2\frac{1}{5} = \frac{9}{5}$, the whole number, or $\frac{12}{5}$, will be $\frac{9}{5} \times \frac{12}{5} = 87$ Ans.

DOUBLE POSITION.

2. (p. 288.) First suppose each laid out \$500; then

$$\begin{array}{r} 4) \$500 \\ \underline{125} \end{array}$$

625 = A's money.

$$\begin{array}{r} \$500 \\ \underline{225} \end{array}$$

275 = B's money.

Then, by the question, $2 \times 275 = \$550$ should be A's money, but A's money is $\$625$; therefore $\$625 - \$550 = \$75$ is the first error.

Again, we suppose each laid out $\$800$; then

$$\begin{array}{r} 4) \$800 \\ \underline{200} \end{array}$$

$1000 = \text{A's money.}$

$$\begin{array}{r} \$800 \\ \underline{225} \end{array}$$

$575 = \text{B's money.}$

Then, by the question, $2 \times \$575 = \1150 should be A's money, but A's money is $\$1000$; therefore $\$1150 - \$1000 = \$150 +$ second error.

OPERATION.

$$\begin{array}{r} 500 \\ 800 \\ 75 \\ \hline 60000 \end{array} \times \begin{array}{r} 75 - \text{first error.} \\ 150 + \text{second error.} \\ 500 \\ \hline 75000 \\ 60000 \\ \hline \end{array}$$

$$\begin{array}{r} 75 + 150 = 225) 135000 (\$600 \text{ Ans.} \\ \underline{1350} \\ 00 \end{array}$$

By ANALYSIS. — A having gained a sum equal to $\frac{1}{4}$ of his stock, his present stock will be $\frac{5}{4}$ of his original stock. B having lost $\$225$, and his present stock being $\frac{1}{2}$ of A's, that is, $\frac{1}{2}$ of $\frac{5}{4} = \frac{5}{8}$ of what he had at first, it will therefore follow that $\$225$ is $\frac{3}{8} - \frac{5}{8} = \frac{3}{8}$ of B's original stock. And if $\frac{3}{8}$ be $\$225$, $\frac{1}{8}$ is $\$75$; and if $\frac{1}{8}$ be $\$75$, $\frac{8}{8}$, or the whole stock, will be $8 \times \$75 = \600 Ans.

3. We first suppose the age of the youngest to be 10. Then, by the question, the age of the next older will be 14, and the next 18, and the oldest will be 22. But, by the supposition, the age of the oldest was twice the age of the youngest, that is, $2 \times 10 = 20$; but the age of the oldest is 22. therefore the first error is $22 - 20 = 2$ — too small.

Again, we suppose the age of the youngest to be 16. Then the age of the next older will be 20, and the age of the next

24, and the age of the oldest will be 28. But, by the supposition, the age of the oldest was twice the age of the youngest, that is, $2 \times 16 = 32$; but the age of the oldest is 28; therefore the second error is $32 - 28 = 4$ —too large.

OPERATION.

$$\begin{array}{rcl}
 \text{First supposition,} & 10 & \times \text{ 2— first error.} \\
 \text{Second supposition,} & 16 & \times \text{ 4— second error.} \\
 & \underline{2} & \underline{10} \\
 & 32 & 40 \\
 & & \underline{32}
 \end{array}$$

$$2 + 4 = 6) 72 \left(\begin{array}{l} 12 \text{ years, the age of the} \\ 72 \text{ youngest.} \end{array} \right.$$

If the youngest be 12, the next older will be 16, and the next older will be 20, and the oldest will be 24. And as the oldest is to be twice the age of the youngest, and as 24 is twice 12, we infer our answer is correct.

BY ANALYSIS. — It appears that his oldest son was 12 years older than the youngest, and that the oldest was also twice as old as the youngest; the oldest must therefore be 24 years old, and the youngest 12; the second son being 4 years younger than the first, and the third being 4 years older than the youngest, their ages will be 20 and 16, Ans.

4. We suppose the value of the first horse to be \$20. Then $20 + 50 = \$70$ will be twice the value of the second horse, that is, the value of the second horse will be \$35. Then, by the question, $35 + 50 = \$85$ will be three times the value of the first horse, that is, the first horse will be worth $\$28\frac{1}{3}$. But, by the supposition, he should be worth but \$20; therefore $28\frac{1}{3} - 20 = \$8\frac{1}{3}$ — is the first error. Again, we suppose the value of the first horse to be \$32. Then $32 + 50 = \$82$ will be twice the value of the second horse, that is, the second horse will be worth \$41. Then, by the question, $41 + 50 = \$91$ will be three times the value of the first horse, that is, the first horse will be worth $\$30\frac{1}{3}$. But, by

the supposition, he should be worth \$ 32 ; therefore $32 - 30\frac{1}{2} = \$ 1\frac{1}{2} +$ is the second error.

OPERATION.

$$\begin{array}{rcl} \text{First supposition, } 20 & \times & 8\frac{1}{2} - \text{first error.} \\ \text{Second supposition, } 32 & \times & 1\frac{1}{2} + \text{second error.} \\ \hline & & 8\frac{1}{2} \quad 20 \\ & & 266\frac{1}{2} \quad 33\frac{1}{2} \\ & & 33\frac{1}{2} \\ \hline \end{array}$$

$$\begin{array}{rcl} 8\frac{1}{2} + 1\frac{1}{2} = 10 &) & 300 \text{ (\$ 30, value of the first horse.} \\ 30 & & \$ 30 + \$ 50 = \$ 80 \div 2 = \$ 40, \text{ the} \\ \hline & & 0 \quad \text{[value of the second horse.} \end{array}$$

BY ANALYSIS. — It appears by the question, that, if the saddle be put on the first horse, the horse and saddle will be twice the value of the second horse ; that is, the first horse will be equal to twice the value of the second horse minus the saddle. Again, if the saddle be put on the second horse, the second horse and the saddle will be equal to three times the value of the first horse ; that is, three times the value of the first horse is equal to the value of the second horse plus the saddle. We have before shown, that the value of the first horse is equal to twice the value of the second horse minus the saddle ; therefore, by adding these quantities, we find that four times the value of the first horse is equal to three times the value of the second horse. Again, as the first horse and saddle were worth twice the second horse, it will follow, that the saddle is worth twice the second horse minus the first horse ; that is, the saddle is worth twice the second horse minus three fourths the second horse, because we have before shown that the first horse is three fourths the value of the second horse ; therefore the saddle is worth five fourths of the second horse ; but the saddle is worth \$ 50 ; and if five fourths of the second horse is worth \$ 50, one fourth is worth \$ 10, and four fourths, that is, the whole value of the second horse, will be \$ 40 ; and, as we have before shown that the first

horse is worth three fourths of the second horse, his value will therefore be \$30 Ans.

5. If we suppose the time to be 3 o'clock, it will be 9 hours to midnight, and $\frac{2}{3}$ of 3 hours will be equal to $\frac{2}{3}$ of 9 hours; but $\frac{2}{3}$ of 3 hours is $\frac{2}{3} \times 3 = 2$ hours, and $\frac{2}{3}$ of 9 hours is $\frac{2}{3} \times 9 = 6$ hours; therefore the first error will be $6 - 2 = 4$. Again, we suppose the time to be 4 o'clock. Then the time to midnight will be 8 hours; therefore, by the question, $\frac{2}{3}$ of 4 hours will be equal to $\frac{2}{3}$ of 8 hours, but $\frac{2}{3}$ of 4 hours is $\frac{2}{3} \times 4 = 2\frac{2}{3}$ hours; and $\frac{2}{3}$ of 8 hours is $\frac{2}{3} \times 8 = 5\frac{1}{3}$ hours; therefore, the second error will be $2\frac{2}{3} - 5\frac{1}{3} = -3$.

OPERATION.

First supposition	3	$\times \frac{2}{11}$	When the errors are fractions, and have a common denominator, their numerators may be used in the operation as if they were whole numbers; because their value is as their numerators.
Second supposition	4	$\times \frac{8}{11} +$	
	2	3	
	8	24	
	24		
	2 + 8 = 10	32	3h. 12m.
		30	[Ans.
		2	
		60	
	10)120	(12	
	120		

By ANALYSIS. — Reducing $\frac{2}{3}$ and $\frac{8}{11}$ to a common denominator, the fractions will be $\frac{8}{33}$ and $\frac{24}{33}$; therefore $\frac{8}{33}$ of the time past from noon will be equal to $\frac{8}{33}$ of the time to midnight. Divide 12 hours into two parts, in the proportion of 8 to 22, and the first part will be the time from noon; thus, $8 + 22 = 30 : 8 :: 12h. : 3h. 12m.$ Ans.

6. We first suppose their income to be \$360 each. Then, as A saves $\frac{1}{12}$ of his income, he will spend $\$360 \div 12 = \30 ; $\$360 - \$30 = \$330$ annually. As B spends \$100 per annum more than A, he will spend $\$330 + \$100 =$

$$\begin{array}{r} 300 \times 10 = 3000 \\ 9 \times 10 \times 9 = 810 \\ \hline 3810 \text{ lbs.} \end{array}$$

But, by the supposition, 21 oxen in 9 weeks would eat 4410 lbs.

The first error will therefore be —600

We next suppose the weekly increase to be 18 pounds per acre; therefore, the amount of the grass of $3\frac{1}{2}$ acres in 4 weeks will be 1240 pounds. Thus,

$$\begin{array}{r} 300 \times 3\frac{1}{2} = 1000 \\ 18 \times 3\frac{1}{2} \times 4 = 240 \\ \hline 1240 \text{ lbs.} \end{array}$$

And the amount of 10 acres in 9 weeks would be 4620 lbs. Thus,

$$\begin{array}{r} 10 \times 300 = 3000 \\ 10 \times 18 \times 9 = 1620 \\ \hline 4620 \text{ lbs.} \end{array}$$

But, by the last supposition, we find that 21 oxen in 9 weeks would eat 4882 $\frac{1}{2}$ pounds. Thus,

$$\left. \begin{array}{l} 12 : 21 \\ 4 : 9 \end{array} \right\} :: 1240 : 4882\frac{1}{2} \text{ lbs.}$$

By subtracting 4620 from 4882 $\frac{1}{2}$ pounds, we find 4882 $\frac{1}{2}$
the second error to be —262 $\frac{1}{2}$.
4620
—262 $\frac{1}{2}$

OPERATION.

First supposition	9	×	600— first error.
Second supposition	18	×	262 $\frac{1}{2}$ — second error.
	600		9
	600	10800	2362 $\frac{1}{2}$
	262 $\frac{1}{2}$	2362 $\frac{1}{2}$	
	337 $\frac{1}{2}$)	8437 $\frac{1}{2}$ (25 lbs. weekly increase.
			8437 $\frac{1}{2}$

Having assumed 300 pounds to the acre, and found the weekly increase to be 25 pounds to the acre, which is $8\frac{1}{2}$ per

cent., we now proceed to find the amount of the produce of 24 acres for 18 weeks. Thus,

$$24 \times 300 = 7200$$

$$25 \times 18 \times 24 = \underline{10800}$$

$$\text{Amount of 24 acres for 18 weeks} = 18000\text{lbs.}$$

$$3\frac{1}{2} \times 300 = 1000$$

$$3\frac{1}{2} \times 4 \times 25 = \underline{333\frac{1}{2}}$$

$$\text{Actual amount of } 3\frac{1}{2} \text{ acres for 4 weeks} = 1333\frac{1}{2}\text{lbs.}$$

The question now is, If 12 oxen eat $1333\frac{1}{2}$ pounds of grass in 4 weeks, how many oxen will eat 18000 pounds in 18 weeks? Then,

$$\left. \begin{array}{l} 1333\frac{1}{2}\text{lbs.} : 18000\text{lbs.} \\ 18 \text{ weeks} : 4 \text{ weeks} \end{array} \right\} :: 12 : 36 \text{ oxen, Ans.}$$

9. As the head and tail of the fish weigh 30lb. and $\frac{1}{2}$ of the body; and as the body weighs as much as the head and tail, it is evident that 30lb. is $\frac{1}{2}$ of half the weight of the fish, and 30lb. is $\frac{1}{4}$ of 36lb.; therefore the head and tail weigh 36lb. The body also must weigh 36lb., because, by the question, it weighs as much as the head and tail both; therefore the whole weight of the fish will be $36 + 36 = 72\text{lb.}$ Ans.

10. OPERATIONS.

(1.) We first suppose the time to be $60\frac{1}{2}$ seconds after 12 o'clock. The hour-hand then will have passed $\frac{60.5}{43200}$ of the distance from 12 to 12 again, and the second-hand will have passed once round and $\frac{1}{20}$ of another time. The difference between these two numbers is $\frac{1}{20} - \frac{60.5}{43200} = \frac{599}{86400}$. The minute-hand will have passed $\frac{60.5}{3600}$ of the distance from 12, and the difference between this number and $\frac{1}{20}$ is $\frac{60.5}{3600} - \frac{1}{20} = \frac{732}{86400}$. We now find the difference between this last number and $\frac{599}{86400}$; $\frac{732}{86400} - \frac{599}{86400} = \frac{133}{86400}$ —first error, too small.

We next suppose the time to be 61 seconds after 12 o'clock. The hour-hand then will have passed $\frac{61}{43200}$ of the distance from 12 to 12, and the second-hand will have passed round

and $\frac{1}{60}$ of another time. The difference of these two numbers is $\frac{1}{60} - \frac{61}{43200} = \frac{659}{43200}$. We now find the difference between the second-hand and minute-hand. The minute-hand has moved in 61 seconds $\frac{61}{3600}$ of the distance from 12 to 12, the difference between $\frac{61}{3600} - \frac{1}{60} = \frac{12}{43200}$. We next find the difference between this last number and $\frac{659}{43200}$; $\frac{659}{43200} - \frac{12}{43200} = \frac{647}{43200} = \frac{1294}{86400}$ + second error. As the denominators of our errors are the same number, we may reject them in the operation; for when fractions have a common denominator, their values are as their numerators.

First supposition 60.5 \times 133— first error.

Second supposition 61 \times 1294 + second error.

$60.5 \times 1294 = 78287$; $61 \times 133 = 8113$; $133 + 1294 = 1427$; $78287 + 8113 = 86400$; $86400 \div 1427 = 60\frac{780}{1427}$ seconds, Ans.

(2.) Suppose the time to be $61\frac{1}{2}$ seconds after 12 o'clock. Then the hour-hand will have moved $\frac{61.5}{43200}$ of the distance from 12 o'clock to 12 again, and the minute-hand will have moved $\frac{61.5}{3600}$ of this distance, and the second-hand will have moved once round and $\frac{1.5}{60}$ again. The difference between $\frac{61.5}{43200}$ and $\frac{61.5}{3600}$ is $\frac{676.5}{43200}$. The difference between $\frac{1.5}{60}$ and $\frac{61.5}{3600}$ is $\frac{3420}{43200}$. We then find the difference between $\frac{676.5}{43200}$ and $\frac{3420}{43200} = \frac{334.5}{43200}$ — the first error.

We then suppose the time to be 62 seconds after 12 o'clock. The hour-hand will then have moved from 12 o'clock $\frac{62}{43200}$ of the distance to 12 again, and the minute-hand have moved $\frac{62}{3600}$ of the distance, and the second-hand will have gone once round and $\frac{2}{60}$ of the distance again. The difference between $\frac{62}{43200}$ and $\frac{62}{3600}$ is $\frac{682}{43200}$. The difference between $\frac{2}{60}$ and $\frac{62}{3600}$ is $\frac{686}{43200}$. The difference between $\frac{682}{43200}$ and $\frac{686}{43200}$ is $\frac{14}{43200}$ + second error.

First supposition 61.5 \times 334.5— first error.

Second supposition 62 \times 14 + second error.

$61.5 \times 14 = 861$; $62 \times 334.5 = 20739$; $334.5 + 14 = 348.5$; $861 + 20739 = 21600$; $21600 \div 348.5 = 61\frac{884}{3485}$ seconds, Ans.

(3.) We will first suppose the time to be 59 seconds after 12 o'clock; the hour-hand will then have advanced $\frac{59}{43200}$ of the distance from 12 o'clock to 12 again, and the second-hand will be within $\frac{1}{60}$ of the distance to 12; therefore, the whole distance between the hour-hand and the second-hand will be $\frac{1}{60} + \frac{59}{43200} = \frac{779}{43200}$; and the distance between the hour-hand and minute-hand will be $\frac{59}{3600} - \frac{59}{43200} = \frac{649}{43200}$, and the difference between $\frac{779}{43200}$ and $\frac{649}{43200} = \frac{130}{43200}$ —the first error.

Again, we will suppose the time to be 58 minutes after 12 o'clock. The distance then between the second-hand and hour-hand will be $\frac{2}{60} + \frac{58}{43200} = \frac{1498}{43200}$. The distance between the hour-hand and minute-hand will be $\frac{58}{3600} - \frac{58}{43200} = \frac{638}{43200}$, and $\frac{1498}{43200} - \frac{638}{43200} = \frac{860}{43200}$ —will be the second error.

First supposition 59 \times 130—first error.

Second supposition 58 \times 860—second error.

$59 \times 860 = 50740$; $58 \times 130 = 7540$; $860 - 130 = 730$;
 $50740 - 7540 = 43200$; $43200 \div 730 = 59\frac{2}{3}$ seconds, Ans.

SECTION LXXIII.

EXCHANGE.

1. (p. 297.) $9765\text{£}. 15\text{s}. 6\text{d}. = 9765.775\text{£}. ; 9765.775\text{£}. \times 4.84\frac{1}{2} = \$47,309.75 +$ Ans.
2. $18761\text{£}. 10\text{s}. \times 1.08\frac{1}{2} = 20,356\text{£}. 4\text{s}. 6\frac{1}{2}\text{d}. +$ Ans.
3. $\$81,727.75 \div 1.095 = \$74,545.89044 ; \$74,545.89044 \div 4.44\frac{1}{2} = 16,772\text{£}. 16\text{s}. 6\text{d}. \text{ Ans.}$
4. $17,000\text{£}. \times 1.06 = 18,020\text{£}. ; 18,020\text{£}. \times 4.44\frac{1}{2} = \$80,088.88 +$ Ans.
5. $172,000 \text{ francs} \times 1.01\frac{1}{2} = 174,580 \text{ francs} ; 174,580 \text{ francs} \times .18\frac{1}{2} = \$32,471.88 \text{ Ans.}$
6. $76,000 \text{ francs} \div 5.08 = \$14,960.62 +$ Ans.

7. 79,000 francs $\times .98 = 77,420$ francs ; $77,420 \text{ francs} \times .18\frac{2}{3} = \$14,400.12 +$ Ans.
8. $\$17,280 \times 5.10 = 88,128$ francs, Ans.
9. As 20 stivers make 1 florin, 10 stivers make .5 of a florin. Therefore $896.5 \times .38 = \$340.67$ Ans.
10. $\$340.67 \div .38 = 896.5 = 896$ florins 10 stivers, Ans.
11. As 40 paras = 1 piaster, 20 paras = .5 piaster. Therefore $78.5 \times .40 = \$31.40$ Ans.
12. $\$31.40 \div 40 = 78.5 = 78$ piasters 20 paras, Ans.

NOTE.—The pupil will perceive, that, in the work of the following questions, the *inferior* denominations are reduced to a decimal of the *superior* denomination before the operation of the question.

13. $896.5 \times .50 = \$448.25$ Ans.
14. 196 rix dollars 2 florins = 590 florins ; $590 \times .17 = \$100.30$ Ans.
15. $\$100.30 \div .17 = 590$ florins ; $590 \div 3 = 196$ rix dollars 2 florins, Ans.
16. 675 rix dollars 2 marks = 2027 marks ; $2027 \times .30 = \$608.10$ Ans.
17. $\$608.10 \div .30 = 2027$ marks ; $2027 \div 3 = 675$ rix dollars 2 marks, Ans.
18. $286.5 \times .90 = \$257.85$ Ans.
19. $\$257.85 \div .90 = 286$ pezze 10 soldi, Ans.
20. $176.5 \times .20 = \$35.30$ Ans.
21. $\$35.30 \div .20 = 176$ lire 10 soldi, Ans.
22. $769.5 \times .80 = \$615.60$ Ans.
23. $\$615.60 \div .80 = 769$ ducati di regno 5 carlini, Ans.
24. $876 \times 2.38,3 = \$2087.50,8$. As 5 scudi are equal to 2 oncie, 3 scudi are equal to $\frac{3}{5}$ oncia ; therefore $\$2.38,3 \times \frac{3}{5} = \$2.85,9\frac{3}{5}$; $\$2087.50,8 + \$2.85,9\frac{3}{5} = \$2090.36,7\frac{3}{5}$ Ans.
25. $\$2090.36,7\frac{3}{5} \div 2.38,3 = 876$ oncie 3 scudi, Ans.
26. $7684.8 \times .75 = \$5763.60$ Ans.
27. $\$5763.60 \div .75 = 7684$ rubles 8 grieves, Ans.
28. $7689 \times \$1.00,0\frac{67}{100} = \$7694.15\frac{163}{1000}$ Ans.

29. $\$7694.15 \frac{183}{1000} \div 1.00,0 \frac{67}{100} = 7689$ scudi moneta, Ans.
30. $7600 \times .75 = \$5700$ Ans.
31. $\$5700 \div .75 = 7600$ dollars of plate, Ans.
32. $476.5 \times 1.07 = \$509.85,5$ Ans.
33. $\$509.85,5 \div 1.07 = 476$ rix dollars 24 skillings, Ans.
34. $462.5 \times .20 = \$92.50$ Ans.
35. $\$92.50 \div .20 = 462$ lire 10 soldi, Ans.
36. $876.5 \times .97 = \$850.20,5$ Ans.
37. $\$850.20,5 \div .97 = 876$ rix dollars 1 florin, Ans.
38. $432.75 \times .50 = \$216.37\frac{1}{2}$ Ans.
39. $\$216.37,5 \div .50 = 432$ rupees 12 annas, Ans.
40. $678.5 \times .50 = \$339.25$ Ans.
41. $\$339.25 \div .50 = 678$ rupees 2 quarters, Ans.
42. $375 \times 1.77\frac{1}{3} = \$666.66,6\frac{2}{3}$ Ans.
43. $\$896 \div 1.77\frac{1}{3} = 504$ star pagodas, Ans.
44. $769\frac{1}{4} \times .92 = \$707.88\frac{3}{4}$ Ans.
45. $\$707.88\frac{3}{4} \div .92 = 769$ rix dollars 40 creutzers, Ans.

SECTION LXXV.

GEOMETRY.

1. (p. 317.) $15 \times 2 = 30$ feet, Ans.
2. $128 \times 48 = 6144$ miles, Ans.

SECTION LXXXIII.

ASTRONOMICAL PROBLEMS.

3. (p. 345.) $1841 \div 4 = 460$; $1841 + 460 = 2301$; $2301 \div 7 = 328$, and 5 remainder; $8 - 5 = 3 = C$, Ans.
4. $1899 \div 4 = 474$; $1899 + 474 = 2373$; $2373 \div 7 = 339$, and 0 remainder; therefore A, Ans.
5. $1896 \div 4 = 474$; $1896 + 474 = 2370$; $2370 \div 7 = 338$, and 4 remainder; $8 - 4 = 4 = D$ and E, Ans.
6. $1786 \div 4 = 446$; $1786 + 446 = 2232$; $2232 \div 7 = 318$, and 6 remainder; $7 - 6 = 1 = A$, Ans.
7. $1837 \div 4 = 459$; $1837 + 459 = 2296$; $2296 \div 7 = 328$, remainder 0; therefore A, Ans.

OPERATION.

10.

4)1849

462

7)2311

330 — 1

8 — 1 = 7

As 7 remains, the dominical letter will be G; therefore January will begin on Monday, and the 7th day will be the Sabbath. The 7th of December will, therefore, by the rule, be on Friday, and the 8th will be Saturday, Ans.

OPERATION.

11.

4)1857

464

7)2321

331 — 4

8 — 4 = 4

As 4 remains, the dominical letter will be D, and January will begin on Thursday; therefore the 4th day will be the Sabbath, and the 4th of July will be Saturday, Ans.

OPERATION.

12.

4)1890

472

7)2362

337 — 3

— 3 = 5

As 5 remains, the dominical letter will be E, and January will begin on Wednesday; therefore the Sabbath will be on the 5th, and the 5th of March will be on Wednesday, and the first day will be Saturday, Ans.

OPERATION.

13.

$$4)1776$$

$$\underline{444}$$

$$7)2220$$

$$317 - 1$$

$$7 - 1 = 6$$

As 6 remains, the dominical letters will be F and G; but F will be the dominical letter for July, and the 6th of July will be on Saturday, and the 4th will be on Thursday, Ans.

OPERATION.

14.

$$4)1874$$

$$\underline{468}$$

$$7)2342$$

$$334 - 4$$

$$8 - 4 = 4$$

As 4 remains, the dominical letter will be D; therefore January will begin on Thursday, and the 4th day will be the Sabbath, and the 4th of December will be Friday, and the 8th will be Tuesday, Ans.

SECTION LXXXIV.

$$8. \frac{\frac{3}{8}}{\frac{1}{8}} = \frac{3}{1} \times \frac{8}{7} = \frac{24}{7} = 3\frac{3}{7}; 9\frac{1}{8} = 9 + \frac{1}{8}; \frac{1}{8} = \frac{1}{8} \times \frac{8}{5} = \frac{8}{5}; 9\frac{8}{5}$$

$$= 32\frac{1}{5}; 32\frac{1}{5} \times \frac{8}{7} = \frac{256}{7} = 36\frac{4}{7}; \frac{7}{5} = \frac{7}{5} \times \frac{5}{1} = \frac{35}{1}; 8\frac{1}{4} = \frac{31}{4};$$

$$\frac{4}{5} \times \frac{35}{8} \times \frac{35}{4} = 24\frac{1}{2}; \frac{1926}{245} \times \frac{245}{8} = \frac{1926}{8} = 240\frac{3}{4} \quad [\text{Ans.}]$$

$$9. 12\frac{12}{7} = 12 + \frac{12}{7}; \frac{12}{7} = \frac{12}{7} \times \frac{1}{1} = \frac{12}{7}; 12\frac{12}{7} = \frac{1012}{7};$$

$$\frac{2}{10} = \frac{2}{10} \times \frac{10}{10} = \frac{20}{100} = \frac{2}{10}; \frac{1013}{84} \times \frac{4}{9} = \frac{1013}{189}; \frac{1013}{189} \times \frac{100}{100} =$$

$$= \frac{101300}{18900}; \frac{3}{12} = \frac{3}{12} \times \frac{12}{11} = \frac{3}{11}; 7\frac{1}{2} = \frac{14}{2}; \frac{9}{22} \times \frac{36}{5} = \frac{162}{55}; \frac{101300}{18900} \times \frac{162}{55} = \frac{25711500}{1039500} = 181\frac{11331}{10395} \text{ Ans.}$$

$$10. \frac{2}{3} \times \frac{5}{6} = \frac{10}{18}; \frac{1}{2} - \frac{10}{18} = \frac{8}{18} \text{ Ans.}$$

11. As there is a son and a daughter, the son will have $\frac{4}{7}$ of the estate, the wife $\frac{2}{7}$, and the daughter $\frac{1}{7}$. If there had been only a daughter, her share would have been $\frac{2}{3}$; consequently she loses $\frac{2}{3} - \frac{2}{7} = \frac{8}{21}$. Hence

$$\frac{8}{21} : \frac{7}{21} :: \$2400 : \$2100 \text{ Ans.}$$

$$12. \frac{1}{3} \times \frac{1}{2} = \frac{1}{6} = 10 \text{ min. } 18 \frac{2}{3} \text{ sec. Ans.}$$

NOTE.—We use the fraction $\frac{12}{13}$, because the minute-hand passes the hour-hand twelve times in thirteen hours.

$$13. \frac{1}{3} + \frac{1}{4} = \frac{7}{12}; \frac{1}{3} = \frac{4}{12}; \frac{1}{4} = \frac{3}{12};$$

$$\frac{7}{12} : \frac{4}{12} :: \$100,000 : \$57,142\frac{2}{3} \text{ A's part, } \left. \begin{array}{l} \frac{7}{12} : \frac{3}{12} :: \$100,000 : \$42,857\frac{1}{3} \text{ B's part,} \end{array} \right\} \text{ Ans.}$$

14. If the first man's share be subtracted from the whole, there will remain $\frac{1}{3} - \frac{7}{8} = \frac{1}{24}$; and $\frac{7}{8}$ of $\frac{1}{24} = \frac{7}{192}$ = the second son's share. And $\frac{7}{8} - \frac{7}{192} = \frac{125}{192}$ = difference of their legacies. $\frac{7}{8} = \frac{125}{128}$; $\frac{125}{128} + \frac{7}{192} = \frac{391}{384}$ = legacy of both sons. Hence $\frac{391}{384} - \frac{391}{384} = \frac{1}{384}$ = wife's legacy. Therefore

$$\frac{1}{384} : \frac{1}{128} :: 257\text{s. } 4\text{d.} : 635\text{s. } 0\text{s. } 10\frac{2}{3}\text{d. Ans.}$$

15. $63 \times 12 \times 12 \times 1000 \times 3 = 27216000$; $27216000 \div 16 = 1701000\text{lb.}$; $1701000 \div 2240 = 759\frac{3}{8}$ tons, Ans.

16. $4\text{ft.} = 48\text{in.}$; $6\text{in.} \times 2 = 12\text{in.}$; $48 - 12 = 36\text{in.}$; $36 \div 2 = 18\text{in.}$; $18 + 12 = 30\text{in.}$; $48\text{in.} : 30\text{in.} :: 200\text{lb.} : 175\text{lb.}$ Ans. $48 - 30 = 18\text{in.}$; $48\text{in.} : 18\text{in.} :: 200\text{lb.} : 75\text{lb.}$ Ans.

17. $25\text{ft. } 4\text{in.} = 304\text{in.}$; $4\text{ft. } 5\text{in.} = 53\text{in.}$; $3\text{ft. } 5\text{in.} = 41\text{in.}$; $53 \times 41 = 2173$; $53 - 41 = 12\text{in.}$; $12 \times 12 = 144$; $144 \div 3 = 48$; $2173 + 48 = 2221$; $2221 \times .785398 = 1744.368958$; $1744.368958 \times 304 \times 8 = 4242305.305856$; $4242305.305856 \div 1728 = 2455.037792 =$ cubic feet in the pillars. $2455.037792 \times 3000 = 7365113.376 =$ weight in ounces; $7365113.376 \div 16 = 460319.586\text{lbs.}$; $460319.586 \div 2240 = 205.49981+$ tons, Ans.

18. If $\frac{3}{4}$ of a certain sum be taken, and \$410 be left, it is evident that \$410 is $\frac{1}{4}$ of that sum, which is $410 \times 4 = \$1640$. Now, if \$717 $\frac{1}{2}$ remain of a certain quantity after $\frac{1}{4}$ be subtracted, it is certain that the number from which it is taken is $\frac{5}{4}$ of \$717 $\frac{1}{2}$ = \$956.66 $\frac{3}{4}$ Ans.

19. $20 \times 19 \times 18 \times 17 \times 16 \times 15 \times 14 \times 13 \times 12 \times 11 = 670442572800$; $1 \times 2 \times 3 \times 4 \times 5 \times 6 \times 7 \times 8 \times 9 \times 10 = 3628800$; $670442572800 \div 3628800 = \1847.56 Ans.

20. $\frac{1}{4} : \$15.60 :: \$100 : \$6240 =$ sum remitted; $\$96 : \$100 :: \$6240 : \$6500 =$ value of goods sold; $\$6500 - \$6240 = \$260 =$ commission, Ans.

21. $\$107.50 : \$100 :: \$9675 : \9000 ; $\frac{2}{5} \times \$9000 = 2025\text{£. sterling} =$ the bill; $\$100 - \$0.25 = \$99.75$; $\$100 : \$99.75 :: \$9675 : \$9650.81\frac{1}{4}$; $\$102 : \$100 :: \$9650.81\frac{1}{4} : \$9461.58\frac{3}{4}$ for investment, Ans.

22. $15 \times 30 = 450$; $15 \times 15 = 225$; $225 + 3 = 75$, $450 + 75 = 525$; $525 \times 220 = 115500 =$ contents of the whole monument, and from this we deduct the contents of the cylinder. $15 \times 11 = 165$; $4 \times 4 = 16$; $16 \div 3 = 5\frac{1}{3}$; $165 + 5\frac{1}{3} = 170\frac{1}{3}$; $170\frac{1}{3} \times .785398 = 133.779459\frac{1}{4}$; $133.779459\frac{1}{4} \times 220 = 29431.481053\frac{1}{4} =$ contents of the cylinder; 115500

—29431.481953 $\frac{1}{2}$ = 86068.51894 + cubic feet of the monument, Ans.

\$ 459.856 : \$ 100 :: \$ 133.056 : \$ 28.931 $\frac{1}{2}$ $\frac{3}{4}$ $\frac{1}{4}$ A pays.

$20 \times 20 \times 20 = 8000$; \$ 459.856 : \$ 133.056 :: 8000 : 2314.742006; $\sqrt[3]{2314.742006} = 13.22$ ft. which A takes.
 \$ 459.856 : \$ 251.856 :: 8000 ft. : 4381.47594 ft.; $\sqrt[3]{4381.47594} = 16.36$ ft.; $16.36 - 13.22 = 3.14$ ft. which B takes.
 \$ 459.856 : \$ 359.856 :: 8000 ft. : 6260.324971 ft.; $\sqrt[3]{6260.324971} = 18.42$ ft.; $18.42 - 16.36 = 2.06$ ft. which C takes.
 $20 - 18.42 = 1.58$ ft. which remains for D.

36. $18.5 \times 18.5 \times 18.5 \times 8 = 50653$; $\sqrt[3]{50653} = 37$ in. wide; $8 \times 8 \times 8 \times 8 = 4096$; $\sqrt[3]{4096} = 16$ in. deep, Ans.

37. As the metal is 1 in. thick, the diameter of the inner sphere is 3 in.; $5 \times 5 \times 5 \times .5236 \times \frac{1}{16} = 16.8861$ lb., weight of the shell, if it were solid iron; $3 \times 3 \times 3 \times .5236 \times \frac{1}{16} = 3.6473976$ lb., weight of the inner sphere if it were iron; $16.8861 - 3.6473976 = 13.2387$ lb. Ans.

38. BY POSITION. — Suppose the time to be 16 minutes past 2 o'clock, the hour-hand must have passed $\frac{1}{6}$ of the distance from 2 o'clock to 3 o'clock; and if the minute-hand were in the place of the hour-hand, it would be 11 m. 20 sec. from 12 o'clock. And if the hour-hand were in the place of the minute-hand, the time would be 12 minutes past 3 o'clock. The difference between 12 m. and 11 m. 20 sec. is 40 sec. Let these be the first error. Again, suppose the time to be 18 minutes past 2 o'clock; the hour-hand, at that time, has passed $\frac{1}{5}$ of the distance from 2 o'clock to 3 o'clock; and if the minute-hand were in the place of the hour-hand, it would be 11 m. 30 sec. from 12 o'clock. And if the hour-hand were in the place of the minute-hand, the time would be 36 minutes past 3 o'clock. The difference between 36 m. and 11 m. 30 sec. is 24 m. 30 sec. = 1470 sec. Let these be the second error. Both errors are plus. We now proceed as in the operation: —

$$\begin{array}{r}
 16 \times 40 + \\
 18 \times 1470 + \\
 \hline
 40 \quad 16 \\
 720 \quad 23520 \\
 \hline

By ANALYSIS.—Let the annexed diagram represent the face of a clock; A, or 60, the 12 o'clock mark; B, 5 minutes; C, 10 minutes; F, 15 minutes; H, 20 minutes, &c., round the same. Suppose, then, the two hands to be together at A, and then the minute-hand to be moved forward $2\frac{1}{2}$ times round, and it will be at F, having moved 135 minutes; and the hour-hand will have moved to a

point, which call D, between C and F. Suppose, then, the minute-hand to be moved still forward to the place required by the supposition, between F and H, which place call G. The hour-hand will then have moved to its place required be-

tween C and F, which place call E. Then, DE being $\frac{1}{2}$ of FG, and FG being $\frac{1}{2}$ of AE, it is evident that DE = $\frac{1}{2}$ of $\frac{1}{2}$ of AE, that is, $\frac{1}{4}$ part of AE; and AD is the other $\frac{3}{4}$ of AE; and so, while the minute-hand moves from A twice round and to G, the hour-hand moves from A to E and while the minute-hand moves from A to E, the hour hand moves from F to G; therefore, as 143 : 144 :: 135m. : 135 $\frac{1}{4}$ m. = 2h. 15 $\frac{3}{4}$ m. = the time at which the hands were in the first position, the minute-hand being $\frac{1}{4}$ of a minute beyond the 3 o'clock mark. Again, 135 $\frac{1}{4}$ m. \div 12 = 11 $\frac{47}{3}$ m. = the minute on the face where the hour-hand was at first. Again, 15 $\frac{3}{4}$ m. — 11 $\frac{47}{3}$ m. = 4 $\frac{8}{3}$ m. = the minutes between the two hands. Again, 60m. — 4 $\frac{8}{3}$ m. = 55 $\frac{5}{3}$ m. = the time between the hands changing places; and 2h. 15 $\frac{3}{4}$ m. + 55 $\frac{5}{3}$ m. = 3h. 11 $\frac{47}{3}$ m. = the time on the clock when the hands would have changed places; and 11 $\frac{47}{3}$ m. \div 12 = $\frac{1}{4}$ of 1 minute = place of the hour-hand beyond the 3 o'clock mark at the time of changing places, Q. E. D.

39. $20 \times 20 \times 20 = 8000$ cubic inches = contents of the larger cube. $20 \times 20 = 400$; $400 \div 3 = 133.33+$, $\sqrt{133.3} = 11.5469+$; $11.5469^3 + = 1539.58+$ cubic inches = contents of the smaller cube, Ans.

40. $90 \times 40 = 3600$; $\sqrt{3600} = 60$ lb. true weight, Ans. $90 - 60 = 30$ lb.; $60 - 40 = 20$ lb.; 30lb. : 20lb. :: 3ft. : 2ft.; that is, the arms of the scales are to each other as 2ft. to 3ft. Ans.

41. Both wheels being of the same height, and the outer wheel making two turns, while the inner one makes only one turn, it will follow, that the outer ring will be twice the diameter of the inner ring. The distance between the rings being 5 feet, and the circumferences of circles being as their diameters, it will also follow, that the diameter of the inner ring will be 10 feet, and the diameter of the outer ring 20 feet.

And if the diameter be 20 feet, the circumference will be 62.83+ feet, Ans.

$$42. 72 \times 72 \times 3.141598 = 57001d. = 237\text{£. } 10s. \text{ } 1d. \text{ Ans.}$$

43. The annexed diagram may represent the conical glass, ABC being the cone, and FDGH a globe or sphere immersed in it. If AB be 5 inches, AD will be 2.5 inches, because AD is half of AB. ADC is a right-angled triangle; therefore the side AC may be found; thus, $\sqrt{AD^2 + DC^2} = AC$; $\sqrt{2.5 \times 2.5 + 6 \times 6} = 6.5 = AC$. Because ADEF is a regular figure, and the angles ADE and AFE being equal, each being a right angle, and the sides DE and FE being also equal, because they are radii of the circle DPHG, the sides AD and AF are also equal. AD is 2.5 inches; AF is also 2.5 inches. If AC be 6.5 inches, and AF 2.5 inches, FC will be 4 inches; $6.5 - 2.5 = 4$ inches. Then, by similarity of triangles (see page 245), $CD : DA :: CF : FE$; $6in. : 2.5in. :: 4in. : 1\frac{2}{3}in. = FE$. If FE be $1\frac{2}{3}in.$, FG will be $3\frac{1}{3}in. = 1\frac{2}{3}in.$, because FG is the diameter of the sphere, and FE the radius or semidiameter. By mensuration of solids (see pages 325 and 326), we find the contents of the cone and sphere in the following manner:—

$$5 \times 5 \times .785398 \times 2 = 39.2699in. = \text{contents of the cone;} \\ 1\frac{2}{3} \times 1\frac{2}{3} \times 1\frac{2}{3} \times .5236 = 19.3925in. = \text{contents of the sphere;}$$

$$19.8774in. = \text{the cubic inches of water}$$

that will remain in the cone after the sphere is immersed. Having taken it for "granted," that cones, spheres, and all similar solid bodies are to each other as the cubes of their homologous sides, we say, As the quantity of water it requires to immerse the sphere in the *given* cone is to the cube of the diameter of the sphere, so is any other quantity of water in

the conical glass to the cube of the diameter of a sphere that may be immersed in it. Now, the quantity of water given to immerse the *required* sphere is $\frac{1}{2}$ of the contents of the conical glass = $\frac{32 \times 2622}{2} = 7.85398$ cubic inches. The cube of the diameter of the *given* sphere is $\frac{10}{3} \times \frac{10}{3} \times \frac{10}{3} = \frac{1000}{27}$ in. Therefore

$$19.8774 \text{ in.} : \frac{1000}{27} \text{ in.} :: 7.85398 \text{ in.} : 14.634114529 \text{ in.} ;$$

$$\sqrt[3]{14.634114529} = 2.445 \text{ in. Ans.}$$

44. Let the larger circle of the annexed figure represent the form of the lady, and the three smaller circles the forms of her daughters. To construct this figure, make the equilateral triangle CBD, each of

whose sides is 10 rods or inches. Bisect each of the sides DC, CB, BD, in the points L, E, K; and draw the lines IF, EG, FI, at pleasure. Upon the points C, D, B, as centres, and with the distance CL as a radius, describe the circles GLK, LHE, KEF. Upon the point A, as a centre, where the lines IF and HM intersect

each other, and with the radius AG, describe the circle G-I-H-N-F-M, and it will touch the peripheries of the smaller circles without cutting them. The sides of the triangle being 10, the diameter of each of the smaller circles will be 10. Because CDE is a right-angled triangle, $CE = \sqrt{CD^2 - DE^2}$; $\sqrt{10 \times 10 - 5 \times 5} = 8.660254$; and as CDE and ADE are similar triangles, $CE : CD :: DE : DA$; that is, $8.660254 : 10 :: 5 : 5.7735027 = AD$. If we add $HD = 5$ to DA , we have the semidiameter of the larger circle, $5.7735027 + 5 = 10.7735027$. By multiplying this last number by 2, we have the diameter of the larger circle, $10.7735027 \times 2 = 21.5470054$. As the area of a circle may be found by mul-

multiplying the square of the diameter by .785398, therefore, by dividing the area by .785398, the quotient will be the square of the diameter. The area of the lady's field is 500 acres = 80000 square rods; $80000 \div .785398 = 101859.18$ square of the diameter; $\sqrt{101859.18} = 319.154006+$ rods = diameter of the lady's farm. To find the diameter of each of the daughters' farms, we say, As the diameter of the larger circle in the diagram is to the diameter of one of the smaller circles in the diagram, so is the diameter of the lady's farm to the diameter of either of her daughters' farms. $21.5470054\text{rd.} : 10\text{rd.} :: 319.154006\text{rd.} : 148.119889+$ rd. = diameter of the daughters' farms; and the distance of their houses from each other, $148.119889 \times 148.119889 \times .785398 = 17231.2406+$ square-rods in each of the daughters' farms; $17231.24+$ rd. $\div 160 = 107\text{A. } 2\text{R. } 31.24+$ rods = acres, &c., in each of their farms; $107\text{A. } 2\text{R. } 31.24\text{rd.} \times 3 = 323\text{A. } 0\text{R. } 13.72\text{rd.}$ amount of the 3 daughters' farms; $500\text{A.} - 323\text{A. } 0\text{R. } 13.72\text{rd.} = 176\text{A. } 3\text{R. } 26.28\text{rd.}$ the lady retained. To find the distance of the lady's dwelling-house from those of her daughters, we subtract the semidiameter of either of the daughters' farms from that of the lady's; thus, $319.154+$ rd. $\div 2 = 159.577+$ rd.; $148.119+$ rd. $\div 2 = 74.059+$ rd.; $159.577+$ rd. $- 74.059+$ rd. = $85.518+$ rd. Ans.

$$45. \frac{35\frac{1}{2}}{52\frac{1}{2}} = \frac{24\frac{1}{2}}{39\frac{1}{2}} = \frac{246}{7} \times \frac{7}{369} = \frac{246}{369} = \frac{2}{3}; \left(\frac{2}{3}\right)^3 = \frac{8}{27} \text{ Ans.}$$

49. \$ 648.95 + \$ 10 + \$ 20 + \$ 68.75 = \$ 747.70; 63 + 51 + 60 = 174; \$ 747.70 ÷ 174 = \$ 1.45 per day. \$ 1.45 × 51 = \$ 73.95; \$ 73.95 + \$ 20 = \$ 93.95; \$ 23.15 + \$ 50 = \$ 73.15; \$ 93.95 - \$ 73.15 = \$ 20.80, being what Carleton received. \$ 1.45 × 60 = \$ 87; \$ 87 + 68.75 = \$ 155.75; \$ 17.48 + \$ 50 = \$ 67.48; \$ 155.75 - \$ 67.48 = \$ 88.27, being what Jones received. \$ 20.80 + \$ 88.27 = \$ 109.07; \$ 400 - \$ 109.07 = \$ 290.93; \$ 17.48 + \$ 23.15 = \$ 40.63; \$ 290.93 - \$ 40.63 = \$ 250.30, being what Smith received, Ans.

50. The sum received for reaping the field was 90 shillings. B received 3 shillings 9d. = 3.75s. less than he would have received, if they had not employed C. As A could reap the field in 9 days, he would in 5 days reap $\frac{5}{9}$ of the field, and would therefore receive $\frac{5}{9}$ of 90 shillings = 50 shillings for his labor, and B and C would receive the remainder, 90 - 50 = 40 shillings, and they would reap $\frac{4}{9}$ of the field.

It appears by the question, that B loses 3s. 9d. by employing C. Therefore, as the sum which B receives is to the sum he loses by employing C, so is the sum that A receives to the sum he loses by employing C.

We have here a question in proportion, where we have only the second and third terms given to find the first and fourth. If we knew all the terms, they would be as follows: —

$$30s. : 3.75s. :: 50s. : 6.25s.$$

We have neither the 30s. nor the 6.25s. given, but we have the 3.75s. and the 50s. given.

As the product of the extremes is equal to the product of

the means, we know, therefore, the product of the first and fourth terms will be $3.75 \times 50 = 187.5$.

We also know, that the sum of the first and last terms is 36.25; for it is certain that the sum of the first, second, and fourth terms is 40 shillings, and if the second term, 3.75s., be taken from 40, the remainder will be 36.25.

We have now the sum of the first and fourth terms, 36.25, and their product, 187.5, given to find those terms.

By Section XXXV., page 159, of the Arithmetic, we find, that, "If any number be divided into two equal parts and into two unequal parts, the product of the two unequal parts together with the square of half the difference of the two unequal parts is equal to the square of half their sum."

Thus, $36.25 \div 2 = 18.125$, half the sum of the two unequal parts. And $18.125 \times 18.125 = 328.515625$, the square of half the sum.

From this last number we subtract the product of the two numbers, and the remainder must be the square of half the difference of the two numbers. Thus $328.515625 - 187.5 = 141.015625$, the square of half the difference.

And $\sqrt{141.015625} = 11.875$, half the difference of the first and fourth terms.

By adding half the sum of any two numbers to half their difference, we obtain the larger.

Therefore $18.125 + 11.875 = 30$ shillings, the sum B received; and $18.125 - 11.875 = 6.25$ shillings, the sum which A would have received in addition to his 50 shillings, if they had not employed C.

As B receives 30 shillings, C will receive $40 - 30 = 10$ shillings.

30s. : 90s. :: 5 days : 15 days, the time B would reap the field.

10s. : 90s. :: 2 days : 18 days, the time C would reap the field.

OPERATION BY ALGEBRA.

4£. 10s. — 1080d. ; 3s. 9d. = 45d. Let x = the time in which B can do the work. Then $9 : x :: 45 : \frac{4}{5}x$ = the sum which C must receive from A in part payment for his labor.

Then $45 + \frac{45}{2} =$ the money received by C for his 2 days labor. Now it is evident that the sum received by C must bear the same proportion to the sum received for the whole work, as the part of the work which he performs bears to the whole work.

Hence $\frac{45 + \frac{45}{2}}{1080} = \frac{x+9}{216}$ denote the part of the work performed by C. Therefore $\frac{x+9}{216}$ work : 1 work :: 2 days : $\frac{x+9}{216}$ = $\frac{432}{x+9}$ = the time in which C would do the whole work. Now, since from the question and the operation we see that A performs $\frac{5}{9}$ of the work, B $\frac{x}{9}$ of it, and C $\frac{x+9}{216}$ of it, it is evident that $\frac{5}{9} + \frac{x}{9} + \frac{x+9}{216} = 1$ work. Or, $\frac{5}{9} + \frac{x+9}{216} = 1 - \frac{x}{9} = \frac{4}{9}$, which, being reduced and transposed, gives $x = 15$ days = the time in which B would reap the field. $\frac{432}{x+9} = \frac{432}{24} = 18$ days = the time in which C would reap the field, Ans.

51. $\$0.62\frac{1}{2} \times 100 = \62.50 ; $\$1.00 \times 135\frac{1}{2} = \135.50 ; $\$62.50 + \$135.50 = \$198$; $\$630 - \$198 = \$432$; $120 + 96 = 216$; $216 : 120 :: \$432 : \240 ; $\$240 + \$62.50 = \$302.50 - \$210 = \$92.50$, due to Jenkins. $\$432 - \$240 = \$192$; $\$192 + \$135.50 = \$327.50$; $\$327.50 - \$210 = \$117.50$, due to Betton, Ans.

 000000000000 Ans.

56. In performing this question, we first find the ratio which the perpendicular height of an equilateral triangle has to one of its sides. Let $AGBFC D$ be a circle, and E the centre. From the point A in the circumference, apply the radius AE six times to the circumference, and join AG , GB , BF , FC , CD , and DA , and the figure $AGBFC D$ thus formed is an equilateral inscribed hexagon. Join the alternate angles AB , BC , and CA , and the figure ABC thus formed is an equilateral triangle inscribed. It is equilateral because the three sides subtend the equal arches of the circumference.

$AECD$ is a rhombus, and the diagonal ED is equal to either side of the rhombus. If, therefore, the diameter of the circle BD is 1, the semidiameter ED or BE will be .5; and EH , which is half of ED , will be .25. And as BE is .5 and EH is .25, it is evident that BH is .75, or three fourths of BD , and that EH is one third of BH . If, therefore, we wish to find a point in an equilateral triangle which is at equal distances from the angles, we have only to find the perpendicular height of the triangle BH , and then take one third of this distance and set it off from H to E . E then is at equal distances from A , B , and C .

To find the ratio which AB has to BH , we assume AB to be 1; AH , which is half of AC or AB , will be .5. But

ABH is a right-angled triangle, therefore BH is equal to the square root of the difference of the squares of AB and AH . Thus, $BH = \sqrt{AB^2 - AH^2} = \sqrt{1^2 - .5^2} = \sqrt{1 - .25} = \sqrt{.75} = .8660254$. If, therefore, we multiply the side of any equilateral triangle by .8660254, the product will be its perpendicular height. Q. E. D.

Let ABC be an equilateral triangle, whose sides are 200 feet. Let the tower at A be 30 feet high, the one at B 40 feet high, and the one at C 50 feet. Bisect AB in D , BC in E , and CA in H . Draw CD , BH , and AE . The point M will be the centre of the triangle, and the lines MA , MC , and MB will be equal

to each other. The line CD will be $200 \times .8660254 = 173.20508$ feet, and MD will be $\frac{1}{3}$ of $173.20508 = 57.73502$ feet. As the tower at A is 30 feet high, and the one at B 40 feet, we first ascertain a point F , which shall be equally distant from the top of the tower at A , and the top of the tower at B ; and this we do by similarity of triangles, thus:—Construct the figure $ABDH$.

Make AB 200 feet, AH 30 feet, and BD 40 feet. Draw HC parallel to AB . BC will be 30 feet, and CD 10 feet. Take the point F at

equal distances from A and B ; AF or FB will be 100 feet. Draw FE at right angles to AB . It will readily be perceived that EF is 35 feet. Draw EG , making the angle $FE G$ equal to the angle CHD . Then, by similarity of triangles, HC will be to DC as EF to FG ; that is, as 200ft. : 10ft. :: 35ft. :

1.75ft. = the distance from F to G. Let F (Fig. 2), then, be a point in the line A B, which is 1.75 feet from D. A F will then be 101.75 feet, and F B, 98.25 feet. Draw F L parallel to D C ; any point, therefore, in the line F L will be equally distant from the top of the towers at A and B. By a process similar to the above, we find the distance E G to be 2.25 feet.

Thus, 200ft. : 10ft. :: 45ft. : 2.25ft. We draw G K parallel to E A ; and as the point G is equally distant from the top of the towers at B and C, it is evident, that if any point be taken in the line G K, it will also be equally distant from the summit of said towers. Let this point be N. We have before shown, that any point in the line F L will be equally distant from the top of the towers at A and B. Let this point also be N. Therefore, the point N is equally distant from the summit of the three towers at A, B, and C. S P N is an equilateral triangle, and its perpendicular height R P, which is equal to G E, is 2.25 feet. As we have before found, the ratio of the side of an equilateral triangle to its perpendicular height is as 1 to .8660254 ; we therefore infer, that the ratio of the perpendicular height of an equilateral triangle is to one of its sides as .8660254 to 1. Then, as .8660254 : 1 :: R P : N P = .8660254 : 1 :: 2.25 : 2.598076 = N P. To find P T, which is half of P U, we say, as .8660254 : .5 :: M T : P T ; that is, as .8660254 : .5 :: 1.75 : 1.010362 = P T. We now add F T, P T, and P N together, 57.73502 + 1.010362 + 2.598076 = 61.343458 = N F.

As N F B is a right-angled triangle, N B will be equal to the square root of the sum of the squares of F N and F B. That is, $NB = \sqrt{(NF^2 + FB^2)} = \sqrt{(61.343458^2 + 98.25^2)} = \sqrt{(3763.019839397764 + 9653.0625)} = 115.8277 +$.

To find the length of the ladder, which is to extend from the point N to the top of the tower B, as it is the hypotenuse of a right-angled triangle, we square N B, which we have found above to be equal to the sum of the squares of N F and B F = 13416.082339397764, and also square the height of

the tower B = 1600. We find the sum of these squares to be 15016.082339397764. The square root of this number will be a line extending from N to the top of the tower B, which is the length of the ladder required. $\sqrt{15016.082339397764} = 122.54+$. To find the line NC, from the square of the length of the ladder we subtract the square of the height of the tower C, and then extract the square root of the remainder. Thus, $15016.082339397764 - 2500 = 12516.082339397764$; $\sqrt{12516.082339397764} = 111.875+$ feet. To find the distance NA, we subtract the square of the height of the tower A from the square of the length of the ladder, and then extract the square root of the remainder. Thus, $15016.082339397764 - 900 = 14116.082339397764$; $\sqrt{14116.082339397764} = 118.811+$ feet. We therefore find the distance from the point N to the first tower A to be 118.811+ feet; to the second tower, B, 115.827+ feet; to the third tower, C, 111.875+ feet. Length of the ladder 122.54+ feet. Ans.

THE END.

POPULAR SERIES OF ARITHMETICS,

ADAPTED TO ALL GRADES OF PUPILS;

IN THREE BOOKS.

BY BENJAMIN GREENLEAF, A. M.

PRINCIPAL OF BRADFORD (MASS.) TEACHERS' SEMINARY.

IMPROVED STEREOTYPE EDITIONS.

THE publisher invites the attention of Teachers and School Committees to this valuable series of Arithmetics, and especially to the important improvements which have recently been made.

I. MENTAL ARITHMETIC.

This book, as its title indicates, is strictly *mental*, and designed for children; and while it is sufficiently simple and easy for "beginners," it advances with gradual steps till it presents to the learner all the Tables in simple and compound numbers, and many ingenious and practical questions under them, and also several sections in simple fractions, the whole being admirably adapted to the capacities of young scholars, and to prepare them for the next book of the series.

II. INTRODUCTION TO THE NATIONAL ARITHMETIC.

This book consists of mental and written Arithmetic, "on the **INDUCTIVE SYSTEM**, combining the **ANALYTIC AND SYNTHETIC METHODS**."

The present edition has been thoroughly revised and entirely rewritten, and nearly 150 pages of new matter have been added. The following are some of the prominent features of this work.

1. The arrangement is strictly progressive and philosophical, no principle being *anticipated*.

2. The language is simple, precise, and accurate, rendering the rules, definitions, and illustrations, intelligible to the pupil.

3. The examples are eminently *practical*, and adapted not only to illustrate and fix in the mind the principles which they involve, but also to interest the pupil, exercise his ingenuity, and inspire a love for the science.

4. The *reasons* for the operations have been shown, and the learner is led to look into the philosophy of the subject, rather than perform mechanically operations which he does not understand.

5. The subject of Cancellation is more fully treated, it is believed

than in any other work of the kind. The principles upon which it depends, and the different modes of operation are fully developed, and its application and use are made perfectly clear to the scholar.

6. Several subjects not in the former edition, have been added in this; as, Ratio, Duties, Profit and Loss, Factors, Progression, Annuities, &c.; and others, as, Notation and Numeration, Interest, Proportion, Extraction of the Roots, and their application, have been greatly extended and improved, *making the book sufficiently extensive for Common Schools.*

7. Questions have been inserted at the bottom of the pages, designed to direct the attention of teachers and pupils to the most important principles of the science, and fix them in the mind.

III. THE NATIONAL ARITHMETIC.

This book is designed more particularly for advanced scholars in our Public Schools, High Schools, and Academies, and, like the INTRODUCTION, combines the ANALYTIC AND SYNTHETIC METHODS. It was revised in 1847, and contains the most valuable modern improvements.

In describing its prominent characteristics it may be remarked, —

1. That it is a complete system of itself, comprising all the elementary Rules, as well as those pertaining to the higher branches of the science, together with a full illustration and demonstration of their principles, and contains, it is believed, a greater amount and variety of matter strictly arithmetical, than can be found in any other treatise of the kind.

2. It embraces a large amount of mercantile information not usually found in arithmetics, but important to those destined for the warehouse or counting room.

3. The Custom House business, carefully prepared by officers of the Boston Custom House, the Philosophical and Geometrical Problems, the articles on Banking and Exchange, are full, and have passed under the revision of those who are well acquainted with these respective departments.

Of the entire Series of Arithmetics thus briefly described, we have ample testimony from many of the most intelligent School Committees and Teachers in New England and elsewhere, *that it is better adapted than any other before the public, to secure to the pupil MENTAL DISCIPLINE, thorough knowledge of the principles of the science, and facility in their application.*

The great popularity of Greenleaf's Arithmetic is indicated by the fact that it is now in general use in the best schools throughout New England, including the several STATE NORMAL SCHOOLS, in Massachusetts, in New York City, and in hundreds of academies and select schools in various sections of the United States.

Two editions of this Arithmetic, one containing the *answers* in the book, and the other without them, are now published.

COMPLETE KEYS to the INTRODUCTION and NATIONAL ARITHMETICS, containing full solutions and explanations, are prepared *for the convenience of teachers only.*

Copies of the work will be furnished for examination, on application the Publishers, ROBERT S. DAVIS & Co., 118 Washington Street, BOSTON, or to SANBORN & CARTER, Exchange Street, PORTLAND.

The attention of Teachers and Superintendents of Schools, is respectively invited to this popular system of Arithmetic, which is well adapted to all classes of students. Copies of the work furnished for examination, on application to the Publisher. To those who have not had an opportunity to examine the work, the following testimonials from eminent teachers, indicating some of its peculiar excellences, are submitted:

PHILLIPS ACADEMY, Andover, May 15, 1846.
Your "National Arithmetic" has been used as a text book in this Institution for several years. We had previously made trial of several different systems, and the comparison has satisfied us that your work possesses *decided advantages over all others now in use.*

One of the peculiar excellences of your book is, that the examples are so constructed and diversified as to *exhaust the subject.* It would be almost impossible for a pupil to perform your examples in course, and remain ignorant of any of the important principles of the science. Your work is also happily adapted to accomplish a still higher and more important object, — *mental discipline.* There are various other points to which I might allude, as the originality of your examples, their practical character, &c.; but the crowning excellence of your system is, that it *works well* in the school-room.

We have used your "Introductory Arithmetic" in our preparatory department for the last two years, and find it to possess substantially the same valuable qualities that characterize the larger work.

B. Greenleaf, Esq.

W. H. WELLS,
Instructor in English Department.

From Marshall Conant, Esq., Principal of Framingham Academy, — formerly a Teacher in one of the Public Schools, Boston.

After giving Greenleaf's Arithmetic and Introduction a pretty thorough examination, I concluded to give them a trial; and it has been attended with success. The definitions and rules, both in the National Arithmetic and Introduction, are stated with admirable clearness. A feature of these works, which pleases me much, is the *selection of such examples as fully illustrate the principles, and teach a skilful application of the rules of arithmetic.* The "Mental Arithmetic" by the same author, is well arranged and perspicuous, and goes so far as to prepare the pupil to enter with ease the next work of the series. I particularly like the tables, and the application of them in the latter part of the book. In publishing all the works of this author, I feel that you are doing good service to the cause of education.

Framingham, July 3, 1845.

MARSHALL CONANT.

The Mental, Introductory, and National Arithmetics, by Mr. Greenleaf, have been for some time used in the school under my charge; so that, from experience I can speak freely of their merits. The rules are given in clear and precise language; illustrated where necessary by examples; and furnished with so many questions, skilfully varied, as to render it impossible for any one, after fairly going through the series, to be without a competent knowledge of the subject.

These observations apply particularly to the National Arithmetic. Its efficiency is acknowledged wherever it has been used. During the last six years I have had scholars in every stage of progress, and I have invariably found that it furnished all the information which they desired, while by its systematic arrangement the principles of the science were acquired with pleasure and facility. It is superior, in my opinion, to any work now before the public.

Marblehead, April 11, 1846.

JAMES B. BATCHELLER,
Principal of Centre School.

After a careful examination of Greenleaf's Arithmetic, and comparing it with a library of Arithmetics which I am fortunate enough to possess, I am prepared to say, that as a practical and scientific work, it is the best I have seen; and I can but regard it only as a valuable acquisition to this department of education. The peculiar excellences of the work, consist in the clearness of its arrangement and the omission of a mass of explanation, tending to confuse the pupil, and to defeat what I regard as one great object of education, *the learning of the young to think.* It is a work which should be introduced into all our schools, and I am persuaded that when its merits become known, it will supersede many works of more extensive circulation, but of far less merit. Having felt that an arithmetic prepared for the higher schools, and at the same time adapted to the comprehension of very young pupils, was a great desideratum, I have for a long time desired to see such a work as this which I have now in use in my school.

Bangor, Me., June 15th, 1844.

MOSES WOOLSON,
Principal of the Female High School.

After a trial of several months, Greenleaf's Arithmetics have been adopted as text-books for the classes in my department of instruction. The general arrangement of the introduction of several of the old modes of working problems omitted by so many of the present time, the numerous examples, the clearness and perspicuity of the rules, and the placing of the answers with the sums, are among the advantages possessed by those works, which in my view justly entitle them to preference.

New York, January 24, 1844.

WM. TAYLOR A. M.,

Instructor in Natural Philosophy and Mathematics, Washington Institute.

Having had occasion to examine the several treatises upon Arithmetic used in our best schools, and to select from them one for the use of the pupils of the Commercial Department of the University Grammar School, I found Emerson's 3d part and Greenleaf's National Arithmetic to possess apparently about equal degrees of merit. After having taken several large classes through Emerson's, and several others through Greenleaf's, I have adopted the latter as the permanent arithmetic of my school.

ISAAC G. HUBBS, *Commercial and Collegiate School.*

New York, April 9, 1844.

After a careful and rigid examination of Greenleaf's Arithmetic, I do not hesitate to say that it is the *very best* work of the kind extant. I have introduced it into my school, and am delighted with the apparent satisfaction displayed by my pupils.

W. KING, *Classical and English School, 639 Broadway.*

New York, October 2, 1843.

I have carefully examined Greenleaf's Introduction and National Arithmetic. They are, in my opinion, better adapted to the purposes of teaching than any other books in this department of science with which I am acquainted. I prefer them to Emerson's series, which I have used during the last eight years, and I have therefore introduced them into my school.

CHAS. W. FEEKS, 649 Broadway, N. Y.

New York, October 4, 1843.

Classical and English School.

I have examined with great care and attention "Greenleaf's National Arithmetic," and have no hesitation in saying, that I think it excels every other work of the kind with which I am acquainted. I have accordingly introduced it into "All Saints' Parochial School," and most cheerfully recommend it to others of my profession.

WM. A. TAYLOR, *Principal of All Saints' Parochial School.*

New York, October 31, 1843.

B. Greenleaf, Esq. Dear Sir: I thank you most heartily for the "National Arithmetic" you presented me some time ago. After a thorough and practical examination of the work, I can truly say it pleases me more than any I have ever used. The youngest scholars are interested, and love to study it; the oldest give evidence of a clearer and better understanding of the subject than they have ever shown before. Having introduced it into my own school, I would cheerfully recommend it to others.

Yours, very truly,

JOHN JAY GREENOUGH.

New York, September 12, 1843.

I have not only examined Greenleaf's National Arithmetic faithfully, but I have tested its value by use; and I do unhesitatingly pronounce it the best text-book of the kind, that has fallen under my notice, during my entire school-room experience. I shall, hereafter, use no other.

JOSEPH MCKEE,

Classical and English Teacher, Madame Chagray's School.

Union Square, New York, July, 1844.

An attentive examination of Greenleaf's National Arithmetic and the Introduction thereto, has confirmed the favorable opinion I had previously formed from report. The rules, simply yet accurately expressed, the lucid illustrations and copious examples, in fact, the entire arrangement, show them to be works of no ordinary merit, and indicate that they have been prepared by one who is a complete master of the science. I have not the slightest hesitation in giving them a decided preference to any works of the kind I have hitherto seen.

M. J. O'DONNELL, *Principal of Public School, No. 11.*

New York, November 22, 1844.

I have examined, with some care, Mr. Greenleaf's Arithmetic, and, by that examination, imperfect as it was, am forced to the conclusion, that on several accounts, it is valuable to most, if not all other works on that subject, that I have seen.

JAMES N. McELLIOTT, *Principal of the Mechanic Society School.*

York, January, 1844.

RECOMMENDATIONS OF GREENLEAF'S ARITHMETIC.

GREENLEAF'S NATIONAL ARITHMETIC is now used as a text-book in the following important seminaries of learning, among others, which fact may be considered a high recommendation for the work.

☞ The several STATE NORMAL SCHOOLS in Massachusetts, under the direction of the State Board of Education.

The *Normal Schools* in New York City; Rutgers Female Institute, New York; Brooklyn (N. Y.) Female Academy; Abbott Female Academy, and Phillips Academy, Andover; Chauncey Hall School, Boston; Bradford Female Seminary, (Mass.) Miss Hasseltine, Principal; Phillips Academy, Exeter; the Young Ladies' Institute, Pittsfield; Williams Academy, Stockbridge; Worcester County High School, Worcester; Catholic College, Worcester; Wesleyan Academy, Wilbraham; Amherst Academy; Quabog Seminary, Warren; Framingham Academy; Hingham Academy; Portland Academy; Peirce Academy, Middleborough; Partridge Academy, Duxbury; Lowell Academy; Bristol Academy, Taunton; New Bedford Academy; Rev. D. Leach's Select School, Roxbury; Putnam High School, Newburyport; Friends' Academy, Providence; Kimball Union Academy, Meriden, (N. H.); Pembroke Academy; New Hampton Academy; Keene Academy; Hillsboro' Academy; Mount Caesar Seminary; Belfast Academy; Thetford Academy; Caledonia County Grammar School; the High Schools or Academies in Woodstock, Middlebury, Rutland, Montpelier, Burlington, Bradford, and many other towns in Vt.; the High Schools in Hallowell, Augusta, Waterville and Bangor, and many other distinguished institutions in various parts of the United States; and wherever the work has been introduced, *it is still used with great success*,—which is deemed a sufficient recommendation.

The whole or a part of this series, has been recommended and adopted by the superintending school committees of the principal towns throughout New England, including Andover, Haverhill, Newburyport, Salem, Beverly, Lynn, Portsmouth, Worcester, Springfield, Northampton, Pittsfield, Taunton, Fall River, Pawtucket, Bristol, Marblehead, Duxbury, Kingston, Plymouth, Weymouth, Hingham, Milton, Barnstable, Ipswich, Danvers, Brookline, Newton, Watertown, Medford, Quincy, Dedham, Nashua, Manchester, Concord, Fitzwilliam, Keene, Portland, Bangor, Belfast, Hallowell, Augusta, Waterville, Hartford, Norwich, and in the best public and private schools in various sections of the United States.

GREENLEAF'S ARITHMETICS are used in most of the Select Schools and Academies (including the following) in New York City, which are of the first grade.

☞ This system of Arithmetic is also the text book in the "*Normal School*"—male and female,) under the supervision of the Public School Society, and *Ward Schools* in the City of New York, and in various parts of the State.

NEW ELOCUTIONARY WORKS,

PUBLISHED BY

ROBERT S. DAVIS, BOSTON.

THE PRACTICAL ELOCUTIONIST. FOURTH EDITION.

THE NATIONAL SPEAKER. TENTH ED. 12mo. pp. 360.

Since the first edition of the above works was issued, a few months ago, they have met with a very favorable reception, and one or both have been adopted as text-books by School Committees or teachers in Roxbury, Cambridge, Charlestown, Salem, Lowell, Springfield, and in several other important places.

RECOMMENDATIONS.

From Rev. Thomas Hill, A. M., Member of the School Committee, Waltham, Mass.

As I looked over the "Practical Elocutionist" of Mr. Maglathlin, I found my old Whatelean prejudices against rules for utterance vanish. The practical, intelligible, and valuable nature of the rules in this little book makes it the only thing I have ever seen which I thought would help either teacher or scholar in our common schools in learning to read well.

From Levi Reed, Principal of the Washington School, Roxbury, Mass., and President of the Norfolk County Teachers' Association.

I have examined "The Practical Elocutionist" with much satisfaction, and am happy to say that I like its plan and matter. A brief manual of vocal culture, like this, has been much needed, and I have no doubt, that, in the hands of a skilful teacher, it may be used with the happiest results.

From C. C. Chase, A. M., Principal of the High School, Lowell, Mass.

I know of no work on the subject of Elocution which I can more highly recommend than "The Practical Elocutionist."

From W. B. Wait, Principal, and H. A. H. Wait, Preceptress, of Melrose Academy, near Boston, Mass.

"The Practical Elocutionist" is, as it should be, brief; but being, throughout, definite, lucid, and thoroughly practical, it is abundantly full and comprehensive. It seems to us exactly adapted to supply our public schools and academies with what many excellent teachers have hitherto regarded as a great desideratum. Having introduced it into the institution under our charge, and had opportunity to test its merits by actual use, we are prepared to give the work our highest commendation.

PARKER'S EXERCISES IN COMPOSITION.

The great popularity of this work has given it an introduction into almost every Academy and higher Seminary throughout the United States, England, and the British Provinces; and its usefulness, as an aid in teaching this important branch of education, has been acknowledged by hundreds of eminent teachers who have used it.

The School Committee of Boston authorized its introduction into the public schools of the city, soon after the first edition was issued, and it is now the only work on Composition used in them.

The publisher trusts that the improvements contained in the present edition will render the work more acceptable, and give it a still wider circulation.

The following RECOMMENDATIONS have been selected from a large number of valuable notices from the most respectable sources:

From J. W. Bulkeley, Esq., Teacher, Albany.

I have examined "Parker's Exercises in Composition," and am delighted with the work. I have often felt the want of just that kind of aid that is here afforded. The use of this book will diminish the labor of the teacher, and facilitate the progress of the pupil in a study that has hitherto been attended with many trials to the teacher, and perplexities to the learner.

If Mr. Parker has not strewed the path of the student with flowers, he has "removed many stumbling-blocks out of the way, made crooked things straight, and rough places smooth." It is certainly one of the happiest efforts that I have ever seen in this department of letters, — affording to the student a beautiful introduction to the most important principles and rules of rhetoric; and I would add, that if carefully studied, it will afford a "sure guide" to written composition. I shall use my influence to secure its introduction to all our schools.

From Rev. Samuel P. Newman, Professor of Rhetoric in Bowdoin College.

I have examined "Progressive Exercises in English Composition," by R. G. Parker, with much care, and hesitate not to express an opinion that it is well adapted to the purpose for which it is designed. It is well fitted to call into exercise the ingenuity of the pupil, to acquaint him with the more important principles and rules of rhetoric, and to guide and aid his first attempts in the difficult work of composition.

From Walter R. Johnson, Esq., Franklin Institute, Philadelphia.

Having often felt the necessity of reducing to its simple elements the art of composition, and having been compelled, from the want of regular treatises, to employ graduated exercises expressly prepared for the purpose, and similar in many respects to those contained in this treatise, I can speak with confidence of their utility, and do not hesitate to recommend them to the attention of teachers.

From Dr. Fox, Principal of the Boylston School, Boston.

This little manual, by the simplicity of its arrangement, is calculated to destroy the repugnance, and to remove the obstacles, which exist in the minds of young scholars to performing the task of composition. I think this work will be found a valuable auxiliary to facilitate the progress of the scholar, and lighten the labor of the teacher.

From Mr. C. Walker, Principal of the Eliot School Boston.

This work is evidently the production of a thorough and practical teacher, and in my opinion it does the author much credit. By such a work, all the difficulties and discouragements which the pupil has to encounter, in his first attempts to write, are in a great measure removed; and he is led on progressively, in a methodical and philosophical manner, till he can express his ideas on any subject which circumstances or occasion may require, not only with sufficient distinctness and accuracy, but even with elegance and propriety. An elementary treatise on composition, like the one before me, is certainly much wanted at the present day. I think this work will have an extensive circulation; and I hope the time is not distant, when this branch of education, hitherto much neglected, will receive that attention which in some degree its importance demands.

We have seen no work which seems to us so useful as a guide to the teacher, and an aid to the pupil. — *American Annals of Education and Instruction.*

The design of this work is unexceptionably good. By a series of progressive exercises, the scholar is conducted from the formation of easy sentences to the more difficult and complex arrangement of words and ideas. He is, step by step, initiated into the rhetorical propriety of the language, and furnished with directions and models for analyzing, classifying, and writing down his thoughts in a distinct and comprehensive manner. — *London Journal of Education.*

Published by ROBERT S. DAVIS, SCHOOL-BOOK PUBLISHER, No. 118 Washington Street, Boston, and sold by the Booksellers in all the principal cities and towns throughout the United States.

LEVERETT'S CÆSAR'S COMMENTARIES. Cæii Julii Cæsaris Commentarii de Bello Gallico ad Codices Parisinos recensiti, a N. L. Achaintre et N. E. Lemaire. Accesserunt Notulæ Anglicæ, atque Index Historicus et Geographicus. Curavit F. P. LEVERETT. Editio stereotypa.

From John J. Owen, Principal of Cornelius Institute, New York, and Editor of Xenophon's Anabasis.

I have examined with some attention Cæsar's Commentaries, edited by Leverett, and Cicero's Orations, edited by Folsom, and am happy to recommend them to classical teachers, as being, in my estimation, far superior to any other editions of those works, to which students in this country have general access. The typography is fair and accurate, and the general appearance of the books does honor to the enterprising publisher. I hope these editions will be extensively used in our Academies and High Schools.

(Signed) JOHN J. OWEN, *Cornelius Institute.*

New York, Nov. 22, 1843.

I have attentively perused Leverett's Cæsar. The neatness and accuracy of the Text, and the beautiful adaptation of the Notes, compel me to use it in preference to any other that I have seen.

(Signed) E. H. JENNY, *Principal of New York Institute.*

New York, Nov. 1, 1843.

FOLSOM'S CICERO'S ORATIONS. M. T. Ciceronis Orationes Quædam Selectæ, Notis illustratæ. [By CHARLES FOLSOM, A. M.] In Usum Academiæ Exoniensis. Editio stereotypa, Tabulis Analyticis instructa.

From Charles E. West, Principal of Rutgers Female Institute, New York.

I take pleasure in commending to teachers the recent beautiful edition of Folsom's Cicero. The attractiveness of its text, notes, synoptical and analytical tables, and typographical execution, led me to place it in the hands of a class of young ladies, who are reading it with delight.

(Signed) CHARLES E. WEST, *Principal of R. F. I.*

New York, Nov. 1, 1843.

I have examined Cicero's Orations, edited by Charles Folsom, and prefer it to any other I have seen. The Synopsis and Analysis of each Oration are so beautifully given, that it seems as a Rhetoric, as well as a Text Book for learning Latin. I shall use it exclusively in the institution under my charge.

(Signed) E. H. JENNY, *Principal of New York Institute*

New York, Nov. 1, 1843.

I have carefully examined the recent editions of Leverett's Cæsar, and Folsom's Cicero, and fully concur in the opinions above expressed.

(Signed) WM. A. TAYLOR, *Principal of All Saints Parochial School*
New York, Nov. 1843.

These editions of Cæsar and Cicero are highly recommended by the following Teachers, who have recently adopted them, in preference to all others.

ISAAC F. BRAGG, *Principal of Male High School,* *New York.*

C. TRACY, " *English and Classical School,* "

B. F. PARSONS, " *Female Classical School,* "

W. MARSH, " *Classical and English School, Lyceum, Brooklyn.*

A GRAMMAR OF THE GREEK LANGUAGE, by BENJAMIN FRANKLIN FISK. Twenty-sixth stereotype edition.

The requisites in a Manual of Grammar, are simplicity and lucidness of arrangement, condensation of thought, and accuracy of principle and expression. These requisites Mr. Fisk appears to have attained in a considerable degree in his Greek Grammar, of which we have expressed approbation by introducing it into our School.

FORREST AND WYCKOFF, *Principals of Collegiate School, New York City.*
New York, October 3d, 1843.

I have used for several years Fisk's Greek Grammar, and I regard it among the best, and perhaps *the best*, now used in our Schools. Pupils instructed in it, encounter less difficulty than in others.

E. H. JENNY, A. M.,
New York, October, 1843. *Principal of "New York Institute."*

Mr. R. S. Davis, — I have examined Fisk's Greek Grammar, published by yourself. To all who will take the trouble to examine it, its own intrinsic merit will be its best recommendation. The Syntax I regard as decidedly superior. The rules are peculiarly clear and *comprehensive*, thereby relieving the student from a heavy tax upon his time and memory, to which he would otherwise be subjected, and from which, perhaps, he is not equally free in the use of any other work of the kind.

C. TRACY, *Principal of Select English and Classical School.*
New York City, October 28th, 1843.

From Benjamin Greenleaf, Esq., author of the National Arithmetic, etc.

Bradford, (Mass.), Teacher's Seminary, October 16th, 1843. — For several years past, I have used Fisk's Greek Grammar in my seminary. I consider it a work of superior merit. It is well arranged; and the rules are clear and perspicuous. It is, in my opinion, better adapted to initiate pupils into the idiom of the Greek language, than any other treatise of the kind, that I have examined. FISK'S GREEK EXERCISES should be used in connexion with the Grammar. A work of this kind has long been needed. It is a production of great merit.

Yours respectfully, BENJAMIN GREENLEAF

Recommendations fully concurring with the above opinions, have been received from the following gentlemen, among many others, who have recently adopted this Grammar in preference to any other.

ISAAC F. BRAGG,	<i>Principal of Male High School,</i>	New York.
JAMES N. McELLIGOTT,	" " <i>Mechanics' Society School,</i>	"
WM. A. TAYLOR,	" " <i>All Saints Parochial School,</i>	"
MOORE AND FISH,	" " <i>the New England School,</i>	"
CHARLES W. FEEKS,	" " <i>Classical and English School,</i>	"
WASHINGTON KING,	" " " "	"
J. JAY GREENOUGH,	" " <i>Select School,</i>	"

☞ *Fisk's Greek Grammar is used in Harvard University, and in many other Collegiate and Academic Institutions, in various parts of the United States.*

FISK'S GREEK EXERCISES. Greek Exercises; containing the substance of the Greek Syntax, illustrated by Passages from the best Greek Authors, to be written out from the words given in their simplest form; by BENJAMIN FRANKLIN FISK. "Consuetudo et exercitatio facilitatem maxime parit." — Quintil. Adapted to the Author's "Greek Grammar." Sixteenth stereotype edition.

Fisk's Greek Exercises are well adapted to illustrate the rules of the Grammar, and constitute a very useful accompaniment thereto.

(Signed) J. B. KIDDER, *Teacher of Select School, New York.*
